Project Description:

Mohawk College is southern Ontario's premier educational destination for skilled trades, training over 3,000 new apprentices each year. The completion of the Skilled Trades and Apprenticeship Research, Resources and Training Institute enables the College to deliver 35% more apprentices to the region. The project includes the creation of a new facility with 88,000 square feet of state-of-the-art instructional spaces and the refurbishment and renovation of existing structures to provide 4,600 students with upgraded labs, classrooms and shops.

Jury Comments:

The entrance to the building is very welcoming and overall the improvements are architecturally beautiful. The enhancements to the entrance also serve a function to provide cover for the main drop off area of the school. The new entrance is visually interesting and improves the relationship between the building and the street.
