

## The Proposed Cycling Network

Cycling infrastructure is implemented in four ways:

- Specific cycling projects (typically retrofits on existing streets)
- Open Space trail construction
- Annual roadway reconstruction and rehabilitation
- Roadway projects as part of new development

In addition to routes shown in the following map, it is recognized that a larger network of cycling facilities is desirable. Opportunities to do low cost cycling upgrades may be found in conjunction with road construction and these should be considered. However, priority will always be given to primary routes, so a basic network can be completed.
