RE: Update to Abrysvo™ and Arexvy for the 2025-2026 RSV Prevention Program

Dear Health Care Providers,

This memo follows our September 10th, 2025 communication regarding the RSV Prevention Program. As the fall respiratory season begins, Hamilton Public Health continues to review the allocation of doses received from the Ministry and compare this supply against the needs of Hamilton residents.

At this time, due to limited supply, Abrysvo™ will only be released to Health Care Providers for administration to pregnant individuals.

We are asking you to vaccinate eligible individuals aged 60+ exclusively with Arexvy moving forward.

Eligibility for Abrysvo™ and Arexvy will be the following:

- Abrysvo™
 - pregnant persons between 32-36 weeks gestation who will deliver during the RSV season, following a discussion with a health care provider.
 - Reminder: Administration of both the vaccine to the pregnant individual and monoclonal antibody to the infant is not needed except under specific circumstances:
 - Infants born less than 14 days after administration of Abrysvo™
 - OR
 - Infants who meet the medical criteria for increased risk of severe RSV disease:
 - All premature infants (i.e., <37 weeks gestation)
 - Infants who meet any of the above high-risk criteria
- Arexvy
 - all individuals aged 75 and older (*new for the 2025-26 season*)
 - individuals 60 to 74 years of age who are also:
 - residents of long-term care homes, Elder Care Lodges, or retirement homes including similar settings (e.g., co-located facilities).
 - patients in hospital receiving alternate level of care (ALC) including similar settings (for example, complex continuing care, hospital transitional programs)

- patients with glomerulonephritis (GN) who are moderately to severely immunocompromised.
- patients receiving hemodialysis or peritoneal dialysis.
- recipients of solid organ or hematopoietic stem cell transplants.
- individuals experiencing homelessness.
- individuals who identify as First Nations, Inuit, or Métis.

As a reminder, if an individual has previously received a dose of RSV vaccine, they do not need to receive another dose this season, as booster doses are not currently recommended.

To place an order, please complete the attached order form and submit by email to Publichealth.Medorders@hamilton.ca or by fax to 905-546-3472.

When ordering, please allow 24-48 hours for processing and ensure that you attach 4 weeks of refrigerator temperatures.

We thank you in advance for your continued support and cooperation.

Sincerely,

Michael Bush PMP

RSV Vaccine Products	Doses in stock	Doses requested
Arexvy 0.5mL Approved for Older adults 75+ and Individuals 60 to 74 yrs who meet eligibility.		
Beyfortus® 100mg Approved for Infants ≥ 5kg		
Beyfortus® 50mg Approved for Infants < 5kg		
Abrysvo™ 0.5mL <i>MUST be reconstituted prior to administration.</i> Approved for Pregnant Individuals.		

Storage and Handling:

To ensure optimal protection, all RSV vaccines must be maintained at a temperature between +2°C and +8°C and this temperature must always be monitored to ensure the cold chain is maintained. Please refer to the product monograph for more information on storage and handling. For additional information on provincial vaccine storage and handling requirements, please refer to the Vaccine Storage and Handling Guidelines.

RSV orders will be filled based on product availability and processed within 4 business days when accompanied by the most current 4 weeks of temperature log (including up to present day). Please note, orders may be adjusted.
