Description

Comments

The strategic acquisition of parkland throughout the City as identified within the Parks Master Plan (PW Report 18-008) was approved at Council on October 11, 2023.  
An estimated population growth of 236,000 by 2051 will translate into a need for approximately 496 hectares of additional parkland (realizing the target of 2.1 hectares / 1000 people).

**Description** The objective of this project is to implement the safety measures as outlined in the In-Service Roads Safety Review (ISRSR) report. Due to the required safety measures, the project became a coordinated road reconstruction with watermain replacement. These changes will extend the life of the roadway, improve the level-of-service, increase safety and reduce maintenance costs. CPMS 11857

Description

The roadway has become structurally deficient and is in need of reconstruction. This will improve the level-of-service, increase safety and reduce maintenance costs. This project is to be coordinated with watermain replacement and sewer upgrades.

Comments

This project is driven by watermain replacement and to be coordinated with road and sidewalk reconstruction. This will improve the level-of-service, increase safety and reduce maintenance costs.

**Description** Following a site visit on April 23, 2024, conducted by Transportation and IR in response to a Councilors inquiry, it was found that the retaining wall is in poor condition, with loose stones, large gaps, and a few displaced stones noted on the dry stack section of the wall, which led to partial local collapse in two spots. It is recommended to completely remove and reconstruct the replacement within the private property and transfer asset ownership to the private owner. CPMS 20012

**Description** The retaining wall is in fair to poor condition, with some cracks, spalls, and delamination noted throughout. The north end of the east wall shows severe signs of concrete deterioration, and loss of stones and mortar is also observed on the overall surface of the wall. The south railing near the east end has a broken bottom rail with some loose sections on the steel posts. CPMS 11835

**Description** In 2022, a minor rehabilitation project was initiated to rehabilitate the structure and address the previously identified needs, along with the rehabilitation of the deck and approach wearing surfaces. This strategy was envisioned as a holding repair strategy aimed at maintaining the bridge's operational safety for the next 10 years. Therefore, a complete replacement is required in 2032 which includes the replacement of both the Superstructure and Substructure components. CPMS 11540

**Description** Based on 2013 OSIM inspection, the retaining wall is in poor condition (RWCR rating of 16). Several locations appear to have significant leaning of the wall towards the road. Numerous stones have spalled from weathering. It is recommended to completely remove and reconstruct the existing retaining wall including railing due to its condition while taking advantage of road reconstruction contract. CPMS 11284

**Description** Site Visit Report (for Beckett Drive Escarpment) provided by EXP on April 07, 2023, determined that the existing masonry wall does not show signs of imminent collapse, yet has deteriorated significantly. The wall exhibits the followings; deterioration throughout, clogged clay weeping tile drainage system, loose rocks, spalling and disintegration with some loss of mortar and stones. The wall is in severe condition and shall be rehabilitated. CPMS 11799

**Description** This structure carries the CN Rail mainline to and from Niagara Region and the US and GO Transit’s Lakeshore West rail service. Based on the finding of 2020 EA, Bridge 332 has a vertical clearance below standard and is a safety risk for tall vehicles that will be frequently using the road after commissioning the HSR Maintenance and Storage Facility. Therefore, it is recommended to replace this old (year built1913) bridge with a shallow-depth structure to free up vertical clearance while also lowering the road to increase vertical clearance to 5.3 m (CN Standard). CPMS 11613

Description

Conduct condition-based inspections of the City's traffic signals, supplementing the life-cycle management through an asset management lens.

Comments

Undertake condition-based inspections of the City's traffic signals, undertaken by contractual services, to identify condition ratings for all locations. Catalogue condition ratings in a database to be utilized for maintenance and capital planning purposes.

Description

Design and rehabilitate the existing round-about in the Meadowlands Neighbourhood as an output of a completed in-service road safety audit.

Comments

Plan, design and construct alterations to the existing roundabouts in the Meadowlands Neighbourhood, specifically on Killy Murray and Stonehenge. Conform with the recommendations contained within the complete in-service road safety audit.

Description

Upgrade of the existing at-grade CN rail crossing on 50 Road to enhance pedestrian accommodations.

Comments

Design and installation of new rail crossing infrastructure, in coordination with CN Rail to upgrade the at-grade crossing to connect existing pedestrian facilities on either side of the rail crossing.

Description

To alleviate historic storm drainage and flooding issues through the installation of storm sewers and urbanization of the right-of-way cross-section on Byron Avenue and Aubrey Avenue from Slinger Avenue to Highland Road - CPMS 11766. Also, to do so in coordination with similar urbanization projects on Highland Rd W (CPMS 11325) and Leckie Ave (CPMS 11641)

Comments

This project is driven by storm sewer installation which is to be coordinated with road and sidewalk urbanization. This will improve the level-of-service, increase safety and reduce maintenance costs.

|-------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Description | This project supports better servicing of new in-fill developments and provides a safer and cleaner option to existing buildings by providing carts as an option to collect garbage at small multi-residential buildings where bags are set at the curb or front-end bins are collected by reversing on to a public street. Garbage carts are required for new properties, for properties currently using garbage bags and for properties currently using front-end collection bins for garbage. |
| Comments    | Funding for this new project will not increase the Waste Management 2025 block as funding has decreased for other 2025 projects.                                                                                                                                                                                                                                                                                                                                                                 |

|-------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Description | Pilot project to design and construct transit stopping area within the roadway to eliminate asphalt distresses at various locations throughout the City. The transit stopping area would be designed by a consultant and then constructed at up to 2 locations where asphalt surface failures are a continuous issue.                                                                                                                                                                                                                                                                                                                                                                                                                     |
| Comments    | Currently the City is experiencing road failures adjacent to some bus stop locations in the City. The road failures are due to the constant stopping and pivoting of the buses at those locations. These failures increase the risk claims of motorists travelling our roadways, maintenance costs, as well as the health and safety of the transit operators. This project would include procuring an engineering consultant to design an alternative method of constructing the roadway in front of transit stops and then constructing that design at approximately 2 locations in high bus traffic areas. The locations would be monitored for distresses and then potentially expanded to other locations in future budget requests. |

Description

To ensure compliance with City Bylaw No 10-103, By-Law Respecting the Prevention of Backflow into the Water Distribution System of the City of Hamilton. The status of non-compliant systems is under investigation and many locations will require installation of backflow prevention devices as well as water meters to gain compliance. This will be a multi-year project with work having commenced in 2024 with the assessment of the current status of all connections, and continuing through 2026 with the installation of backflow devices.

Comments

Initial testing and cross connection surveys of systems to understand status of compliance was funded through the operating budget - ongoing testing and repairs to backflow devices to be funded through operating budget. Installation of new backflow devices and water meters to be funded from this capital project.

| <b>Description</b>                        | Asset Planning, coordinated by the Capital Asset Management team, has completed an asset plan for Parks&Cemeteries 2024. However, there are information gaps for many Parks and Cemeteries asset groups. Studies and assessments will be required to inform the asset management study to ensure compliance with legislation and the provision of strong data confidence to properly inform decision making. |                                          |                                |                        |            |

## 5302551021 - HSR New Radio Deployment

|                    |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
|--------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Description</b> | <p>Hamilton Street Railway (HSR) presently operates six (6) Hardware Media Workstations (HMWS) for dispatching. Avtec no longer provides support for HMWS. The peripherals (speakers, mic, footswitch, etc.) connected to the HMWS are also impacted. As a result, it is advised that HSR upgrade to the Software Media Workstation to ensure continued support of the dispatch consoles. Therefore, the objective of this project is to upgrade the Avtec Scout dispatch system to the current EX version</p> |

## 5302551022 - MTC Security Camera Replacement

|                    |                                                                                                                                                                                                                                                                                                                                                                                                                          |
|--------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Description</b> | The security cameras at 2200 Upper James Mountain Transit Centre (MTC) are unmanaged and nearly 50% of the cameras in the facility do not work (including critical cameras covering the vault and bus cash drop areas). This will replace and modernize any non-working cameras and move ownership management to Corporate Security which aligns with the City of Hamilton's Closed Circuit Television (CCTV) guidelines |

## 3542557111 - Meeting Room Technologies-Hybrid Meeting Rooms (Phase 2)

|                    |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
|--------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Description</b> | Phase 2: Hybrid Meeting Technologies installed in Rooms across the City                                                                                                                                                                                                                                                                                                                                                                                                                                   |
| <b>Comments</b>    | Per SLT request: Hybrid Meeting Technologies are to be installed in Rooms across the City in several phases: Phase 1 consists of approximately 43 Rooms divided into 2 phases of 21 and 22 rooms each at \$660,000 per phase and a total of \$1.320 Million. Phase 1 is running behind schedule. Work for phase 1 will start in early 2025. However, funding is still being requested for Phase 2 as approved by SLT in December 2023. This is not to come out of Facilities Block. SLT funding approval. |

**Description** Fleet Service van located at the West yard, has reached it's end of life and has been approved for replacement. The current replacement does not fit the operational purpose, therefore upgrades are required to ensure Fleet maintains operating group expected levels of service.

**Comments** The current replacement value is \$65k, new upgrade total \$265k = \$200k differential.  
Unit has been approved on the replacement however the unit we are purchasing is larger and requires shelving therefore this request is to cover the additional cost over and above what the current replacement value is.  
Increasing the truck size and unfitting to the unit.

|-------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Description | The project participants (Environmental Services and the Office of Climate Change Initiatives) will purchase two Tweeting kits through a sole source procurement. One will be installed on a veteran tree living in an optimal growing environment, and the other on a younger tree in a less desirable growing climate like the urban core. The instruments are installed discretely and out of reach. The trees will Tweet (or communicate through other social media like Facebook or Instagram) to each other about their experience growing in their environment. The data gathered through the various sensors (dendrometer, sap flow, soil life etc.) reflect climate impacts and allow staff and residents to see how climate change affects our urban forest. This can assist staff in better supporting the urban forest in the future, and enable residents to better understand climate change and better care for their own neighborhood trees. Academics may also be able to use this data through Open Data. |
| Comments    | We are requesting \$27,500 in year 1 and \$1,000 in year 2 from CCR, which will represent 45% of the total project budget. The total cost of this proposal is anticipated to be \$60,000 in year one to fund the purchase and set up of the equipment, followed by \$2,000 annually for maintenance and subscription costs that will be funded through the operating budget.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |

**Description** To Fund the implementation of a new Administrative Penalty System. Adopting an administrative penalty structure for Red Light Camera and Automated Speed Enforcement disputes will move forward Vision Zero, increase public safety, and increase efficient dispute resolution with the additional benefit of allowing more efficient use of limited court time in provincial courts.

Description

Comments

This project will provide funding to cover the cost of one temporary staff in Engineering Services for the two-way conversion of Main St. Per report PW23074/PED23248) - Internal resources would oversee the work of the consultant, and it is anticipated that a project team will be required consisting of approximately four temporary positions within the Engineering Services and Transportation sections, which would be funded through gapping or the capitalization of the project budget. Further, external contract administration support can supplement existing internal resources to aid in delivering the implementation phase of the project.

Description

To install new full traffic signal to enhance road safety and right of way control.

Comments

Design and install a new traffic signal at the intersection of Sterling Street and Forsyth Avenue to enhance the safe operations and in consideration of the entrance to McMaster University.

Description

CLIMATE MITIGATION INITIATIVE The all-electric Bucher City Cat VR50e streetsweeper has a custom-designed Bucher Battery Pack tailored to the sweeper. This proven technology will reduce the City’s environmental footprint while achieving low noise emissions and meeting Council approved initiatives, climate goals and downtown cleanliness. There are no greenhouse gas emissions with this vehicle versus a conventional sweeper which contributes ~89 tCO2e/year. Climate Reserve funding will cover the cost difference between a regular sweeper and the all-electric model.

Comments

Relevant Climate Action Strategy Actions Climate Mitigation Plan: Action 10 -Establish then implement a city-wide Electric Vehicle Strategy (residential, commercial, and municipal)

Description

CLIMATE MITIGATION INITIATIVE Funding will enable the purchase of one electric bike lane sweeping vehicle and one electric bike lane inspection vehicle and the associated charging infrastructure for these vehicles. The City currently does not have cycling lane sweepers or inspection vehicles and so does not have comparative greenhouse gas emissions data; however, our sidewalk sweepers generate approximately 486 tonnes/year (via consumption of180,000L of diesel).These emissions could be entirely avoided by the purchase and use of electric alternatives.

Comments

Relevant Climate Action Strategy Actions Climate Mitigation Plan: Action 10 –Establish then implement a city-wide EV Strategy (residential, commercial, and municipal).

**Description** Feasibility and preliminary design for Fleet 2025 EV infrastructure installation

**Comments** FEASIBILITY STUDY – MITIGATION INITIATIVE The feasibility assessment will review City facilities Fleet Services has previously identified as suitable charging locations and provide high level costing, identify any necessary electrical upgrades, and assess current available capacity. These feasibility assessments are needed because, as fleet greening efforts continue across City divisions, informed action must be taken to ensure a reliable network of vehicle charging infrastructure is available. Relevant Climate Action Strategy Actions Climate Mitigation Plan: Action 10 – Establish then implement a city-wide Electric Vehicle Strategy (residential, commercial, and municipal) The Plan’s Low Carbon Scenario calls for 100% of new municipal small and light-duty vehicles to be electric by 2040.

Description

Comments

To install recommended countermeasures with AODA compliance to enhance roadway safety.

Design and construction of

Old Ancaster Road+Ogilvie Intersection additional paving

Old Ancaster Rd - corridor level- pavement marking- Countermeasures

Old ancaster to Main Street - east side sidewalk (approx. 300m)+ narrow the lane

Old ancaster and Hamilton Brantford Rail Trial - IPS

Old Ancaster and Pleasant - Streetlight upgrades

Design and construction of PXO from D to B at Old ancaster Btwn Ontario and Wilson

Description

Environmental Assessment for Old Ancaster / Old Dundas road between Governors Road and Wilson Street East as recommended through the undertaking of an In-Service Road Safety Report. EA to explore options and recommendations included in the ISRSR.

Comments

RFQ Consultant assignment to undertake an environmental assessment as recommended in the completed Old Ancaster/Old Dundas In-Service Road Safety Review. The output of the EA will provide a detailed plan regarding the future use of the roadways based on complete streets and roadway safety principals.

Description

Comments

Detailed engineering design and budget cost estimate for permanent video message and queue-end warning system displays.  
Roster consultant assignment to undertake detailed engineering design for permanent video message and queue-end warning system displays on the RHVP and LINC, to replace the existing rented equipment. A previous study has been completed to support this work, as well as a safety review which recommended these devices to be used on the parkways to enhance safety.

**Description** The 2020 OSIM inspection noted that retaining wall RW0535 is in fair to poor condition and recommended replacement of the retaining wall and parapet walls in 1-5 years as well as installation of steel beam guardrail system or equivalent for pedestrian safety. Considering similar pedestrian safety concerns along Highway 8 in the same area, retaining walls RW0014, RW0536, RW0537 and RW0538 are to be assessed with RW0535 for replacement or rehabilitation. CPMS 20053

**Description** The 2024 OSIM inspection noted that retaining wall RW0041 is in fair to poor condition and sections of the wall have failed. Replacement of the wall at this stage will help ensure the continued structural integrity and safety of the infrastructure. Concurrently, undertaking the replacement of retaining wall RW0042 (also fair to poor condition) now is both timely and cost-effective, as it will enhance long-term durability and reduce future maintenance costs. CPMS 20056

**Description** Based on the 2021 OSIM reports, Retaining Walls RW0008, RW0134, RW0446 have all been recommended for replacement due to their deteriorated condition, the presence of structural defects, and their correspondingly limited remaining service life. By grouping these three walls into a single project, we aim to attract competitive bids, achieve cost efficiencies, and minimize future disruptions to residents by addressing all three locations concurrently. CPMS 20055

**Description** The objective of the Old Dundas Road Culvert project is to restore and enhance the structural integrity and safety of the culvert. This involves replacing the northwest retaining wall and culvert, repairing asphalt surfaces and barriers, improving water flow and drainage, and ensuring safety for Bruce Trail users. The project aims to address severe delamination, spalling, and rotated retaining walls to ensure the culvert functions effectively and remains safe for all users. CPMS 11802

**Comments** The scope of the Old Dundas Road Culvert project includes replacing the northwest retaining wall and culvert, repairing asphalt surfaces and barriers, improving water flow and drainage, and enhancing safety for Bruce Trail users. This work aims to address structural issues and ensure the culvert's long-term functionality and safety.

Description

Improve active transportation connections between Sealey Park and Smokey Hollow Park. Development of an active transportation crossing to connect Sealey Park to Smokey Hollow, including the fulfilment of Environmental Assessment requirements.

Comments

Active transportation connect improvements are required to support continued access to Smokey Hollow Park. Due to constraints associated with expanding the Smokey Hollow parking lot and installing active transportation facilities along Mill Street, the Waterdown Transportation Master Plan identified the development of a pedestrian bridge connecting Sealey Park to Smokey Hollow Park to accommodate additional growth. Project will work to develop a solution, including the fulfilment of Environmental Assessment requirements.

**Description** The vertical and horizontal realignment of Gravel Pit Road at the rail trail, to facilitate an at-grade and ensure all road infrastructure is within the City right-of-way. This includes fulfilment of Environmental Assessment requirements and the assessment of options to remove the existing bridge.

**Comments** Gravel Pit Road Bridge (Bridge 100) is located on Gravel Pit Road and provides a separated grade crossing for the Hamilton-Brantford Rail Trail. Through OSIM reports, significant rehabilitation works have been identified for the bridge. Through discussions with City staff and Hamilton Conservation Authority staff, there is support for the removal of the bridge, the realignment of the intersection to be at-grade, and the realignment of the road to be returned to the City's designated right-of-way. Project will work to develop a solution, including the fulfilment of Environmental Assessment requirements.

**Description** Improvements to the Sherman Cut and Crockett Street intersection, including the fulfillment of any Environmental Assessment requirements.

**Comments** Through a transportation needs assessment in 2023, intersection improvements were recommended for the intersection of Sherman Cut and Crockett Street, including the consideration of a roundabout. Project will work to develop a solution, including the fulfilment of Environmental Assessment requirements.

**Description** The roadway has become surface deficient and is in need of rehabilitation strategies such as resurfacing and base repairs to improve ridability and public safety. This is intended to improve related levels of service while preserving the asset from further deterioration and reducing ongoing maintenance costs. Condition assessment of subsurface appurtenances are completed and cleared. CPMS 20079

**Description** Based on the 2025 inspection conducted by EXP, several panels of the steel facing wall are severely corroded and showing medium to severe deficiencies. In addition, this structure is near the end of its design service life. Based on the consultant recommendations, it is recommended to remove and replace the steel facing wall taking advantage of the adjacent Bridge 320 replacement and road resurfacing projects. CPMS 11505

Description

The purpose of this capital investment is to protect road infrastructure that is impacted by adjacent ravines and watercourses by mitigating risks associated with erosion, slope instability, and flooding. This investment will help preserve the structural integrity of roadways, culverts, embankments, and bridges by addressing geomorphic changes and hydrologic pressures resulting from natural water systems. It supports climate resiliency, enhances public safety, and reduces long-term rehabilitation and emergency repair costs.

Comments

This capital budget will support the assessment, design, and implementation of road asset protection and rehabilitation measures in areas impacted by ravine erosion, watercourse migration, and flooding. Work will include slope stabilization, culvert upgrades, road platform reinforcement, and localized drainage improvements to address safety risks and preserve road function. Sites will be prioritized based on infrastructure condition, erosion severity, and risk to public safety, and coordinated with broader ravine rehabilitation and stormwater management efforts.

Description

Retaining Wall RW0264 Reconstruction: Reconstruction of the wall is based on the proximity to the proposed sidewalk reconstruction and to address current deficiencies.  
Retaining Wall RW0375 Minor Rehabilitation: Rehabilitation is recommended to complete concrete crack injection repairs to address the vertical cracking within the wall and completely remove and replace the existing railing and concrete wall cap due to its condition and deficiencies. CPMS 10332

**Description** Deliver program of transit hubs required under HSR Next, Transit's next growth strategy. This includes construction of on- and off-street hubs identified in the plan, barring delivery of Hamilton LRT terminals (McMaster and Eastgate). Each hub includes new transit platforms and bus bays, operator space requirements (i.e., washrooms), customer amenities (i.e., shelters, benches, bike parking), and integration with adjacent ROW. Funding is available to support capital construction. The project also includes new stop infrastructure based on the new network design.

**Description** Purchase of new short- and articulated buses required to deliver HSR Next, Transit's next transit growth plan. Over the course of the Plan, 79 total buses are required, split between 37 short buses (budgeted as 30-ft buses) and 42 articulated buses (budgeted as 60ft buses). Replacement buses are funded through a separate program, using Canada Public Transit Fund moneys.

**Description** With the opening of the Transit Maintenance Storage Facility (Birch) in 2026 - Transit requires an increase of radio consoles. Transit currently has 6 radio consoles available however requires a total of 11 radio consoles to fully operate out of both facilities. Additionally, backend infrastructure that supports the radio consoles has been determined to be end of life. This requests supports the purchase of 5 Radio Consoles, and upgrading the backend radio infrastructure to a state of good repair.

**Description** A recent study undertaken to support the recommendations of the RHVP Inquiry has identified that the RHVP requires a superelevation adjustment on the curve located between Greenhill Avenue and King Street. This adjustment will bring the superelevation to within the 2017 Transportation Association of Canada (TAC) Geometric Design Guide guidelines. CPMS 20080

**Description** Replacement of a section of Wentworth Lodge Roof. The total area of the roof is approx. 13272 sq. ft.

**Comments** Replacement of a section of Wentworth Lodge Roof. The total area of the roof is approx. 13272 sq. ft. There has been extensive work over the past few years on roofing replacement and this is the last section to be done. In 2019 consultant firm Thermaco did a study on the complete roofing system and found this section to be in fair condition and advised replacement could be delayed 5-6 years. We are now approaching the 6 year mark and the roof is showing signs of active leaking. Would like to have a roofing design done in order to calculate a cost to be added to future budget request.

| <b>Description</b> | <p>To secure capital funding to pilot 15 real-time solar digital information displays in 2026 to enhance rider experience and fully accessible for all transit users through the provision of timely and accurate transit data including disruptions and general notifications. After a successful year 1, year 2 introduces 29 additional real-time digital information displays. The project will inform a phased-in implementation plan that supports HSR Next and wayfinding. The project aims to comply with contractual and legislative procurement requirements via a competitive bid process, ensure health and safety through user-friendly design enhancements, optimize financial resources, and align with strategic priorities to improve transit efficiency and customer satisfaction.</p> |

**Description** To replace the HSR community engagement and customer education bus with a refurbished retired HSR bus in 2028. The engagement and education bus supports staff attendance at festivals, fairs, schools and other events and teaches customers about schedule and route changes, new programs, how to pay fare, how to use the bike rack, safety, accessibility, and etiquette. HSR staff approximately 150 events annually. The expected vehicle life is 7 years with the next replacement estimated in 2034.

**Description** HSR requires an interface from the Enterprise Asset Management system to Transit's Management Software system of real-time maintenance information to allow for the creation of vehicle maintenance, employee assignments and maintenance records. To ensure successful completion of this implementation, professional services personnel are required from Trapeze.

**Description** HSR requires configuration of their Transit Management Software to support the addition of a second garage facility for scheduling, planning, operations and workforce management. To ensure successful completion of this implementation, professional services personnel are required from Transit Management Software.

**Description** Ensure robust cellular connectivity at the Transit Facility by deploying a Distributed Antenna System (DAS) repeater network to support the PRESTO fare system’s closed-data communication requirements ahead of the facility’s 2026 opening. The preliminary design estimates full coverage for the 500,000 sq ft property, but a site survey will refine the scope to prioritize critical areas with significant signal interference (e.g., maintenance). This solution will guarantee uninterrupted data transmission for fare processing, vehicle communications, and operational reporting while optimizing cost efficiency.

**Description** The implementation of streetscape improvements, pedestrian and cycling enhancements, placemaking features, and beautification efforts that improve accessibility, safety, and vibrancy in the downtown core.

**Comments** Will enable the implementation of streetscape improvements, pedestrian and cycling enhancements, placemaking features, and beautification efforts that improve accessibility, safety, and vibrancy in the downtown core. Investments in the ROW are critical to creating a welcoming and engaging public realm that supports local businesses, mitigates construction impacts, and fosters a sense of community pride and livability for residents and visitors.

**Description** The roadway has become surface deficient and is in need of rehabilitation strategies such as resurfacing and base repairs to improve rideability and public safety. This is intended to improve related levels of service while preserving the asset from further deterioration and reducing ongoing maintenance costs. Condition assessment of subsurface appurtenances is completed and cleared. CPMS 20081

|-------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Description | Investigate and address stormwater drainage and surface condition issues in both assumed and unassumed alleyways located near Strathcona Avenue and Margaret Street. The goal is to reduce flooding risk, improve drainage functionality, and rehabilitate the alley surfaces through informed design and construction.                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
| Comments    | A CCTV and dye test investigation was conducted, but results were inconclusive due to a lack of drawings and indications that some catch basin (CB) leads may run beneath private property. To mitigate flooding in the unassumed alleyway, the proposed work includes installing two new CBs, regrading, and repaving the alley, with an estimated cost of \$200K. This work is subject to a survey/design confirming slope feasibility and may require removing encroachments. For the assumed alleyway, due to poor surface conditions and unknown CB outlets, the recommendation is to cap existing leads, replace the two CBs, redirect drainage to the storm sewer on Margaret Street, and repave the surface. Estimated cost is \$90K, contingent on confirming grading through survey/design. |

| Description | CLIMATE MITIGATION INITIATIVE To purchase battery-powered hand tools such as grass trimmers, blowers, and hedge trimmers to replace approximately 30% of the Divisions’ current gas-powered small tool inventory.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
| Comments    | The Transportation Division is seeking funding to purchase battery-powered hand tools such as grass trimmers, blowers, and hedge trimmers to replace approximately 30% of the Divisions’ current gas-powered small tool inventory. This project supports the City’s Climate Change Reserve Policy as the purchase of these tools will support the current battery-operated tools inventory, in line with advancing the City’s climate change initiatives. This will allow the Division to continue to evaluate the effectiveness and efficiency of these hand tools in their performance of day-to-day maintenance tasks. It ensures more efficient, quieter, and cleaner operations while reducing reliance on gas-powered equipment. |

**Description** This project supports strategic plan priority #7 Built Environment and Infrastructure: The Leaf & Yard Waste Composting Facility is located at the Glanbrook Landfill on a portion of the site that will be used for landfilling in the future Stage 3. Funds will be used by staff for consulting services to assist with implementing the strategy for processing Leaf and Yard Waste collected though the City's curbside collection program. Future years budget request to be used to construct a Leaf & Yard Waste Composting pad should that be the direction recommended by staff

**Description** Based on the OSIM bridge inspection and additional investigations completed, it has been determined that the existing bridge structure has become deficient and is in need of replacement. This is intended to reduce the risk to public safety while maintaining continuity of the road network. This project will include the pavement resurfacing of Dundas St (Hwy 5), from Mill St to 1st Street. CPMS 10278

**Description** Provide an additional snow disposal facility for Roadway Maintenance. Currently, the City utilizes snow dumps on Ottawa and Barton Street. The Barton Street disposal facility will not be available for use after the 2022/2023 season. Additionally, the City is building an LRT which doesn't allow for typical snow plowing, and requires the snow to be hauled to a disposal facility. Purchase land, design and construct snow disposal site for upcoming LRT and to compensate for loss of existing snow disposal facility.

**Description** In accordance with the Local and Collector Road Asset Preservation Strategy, the roadways within this neighbourhood have become surface deficient and are in need of resurfacing and base repairs. This will extend the life of the roadways, improve the level of service, increase safety, reduce risk and liability, and reduce maintenance costs. The proposed project listing, compiled on a neighbourhood basis, shall create attractive contract packages for the paving industry. This may result in potential cost savings and maximize the overall cost effectiveness of program delivery. CPMS 11476

|--------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Description</b> | The roadway has become structurally deficient and is in need of reconstruction. This will improve the level-of-service, increase safety and reduce maintenance costs. This project is to include sidewalk and multi-use path pedestrian enhancements. This project is to be partially-funded by Ward #14 Area Rating funds. This project is coordinated with watermain replacement and sewer replacement. CPMS 11270 (Scenic - Chateau to Goulding) & 11823 (Scenic - Goulding to Upper Paradise) |

**Description** In accordance with the Local and Collector Road Asset Preservation Strategy, the roadways within this neighbourhood have become surface deficient and are in need of resurfacing and base repairs. This will extend the life of the roadways, improve the level of service, increase safety, reduce risk and liability, and reduce maintenance costs. The proposed project listing, compiled on a neighbourhood basis, shall create attractive contract packages for the paving industry. This may result in potential cost savings and maximize the overall cost effectiveness of program delivery.

**Comments** Ward 7 project approved through 2020 Tax Capital Budget. CPMS 10538 & 11709

**Description** In the implementation phase of the Real Estate Disposition Strategy will entail an open and transparent Request for Expressions of Interest (RFEOI) and Request for Proposals (RFP) process, leading to the efficient disposition of the strategically located City-owned real estate assets within the West harbour area. These lands may include the Piers 7&8 lands, the "Barton-Tiffany" lands, as well as the potential sites approved by the CityHousing Hamilton Board of Directors.

**Description** Based on the existing condition of the bridge, it has been determined that the bridge has become deficient and is in need of replacement. Extensive signs of wear, corrosion, and structural weaknesses have significantly compromised its structural integrity. These critical findings underscore the urgency of replacing the bridge, as its compromised state poses serious risks to both the public and the continued functionality of the transportation network. **Description** The roadway has become structurally deficient and is in need of reconstruction. This project is to be coordinated with the permanent removal of the existing overhead Burlington Street bridge. A new road is to be constructed at-grade along with pedestrian and cycling improvements. This will improve the level-of-service, increase safety and reduce maintenance costs. This project is also to be coordinated with watermain replacement. CPMS 10460

**Description** The roadway has become structurally deficient and is in need of reconstruction and urbanization to improve ridability and service level. This is intended to improve related levels of service while reducing overall risk, liability, and ongoing maintenance costs. This project is to be coordinated with watermain replacement and storm sewer upgrades. CPMS 10917

**Description** The roadway has become surface deficient and is in need of rehabilitation strategies such as resurfacing and base repairs to improve ridability and public safety. This is intended to improve related levels of service while preserving the asset from further deterioration and reducing ongoing maintenance costs. Condition assessment of subsurface appurtenances are completed and cleared. CPMS 10117

**Description** In accordance with the Local and Collector Road Asset Preservation Strategy, the roadways within this neighbourhood have become surface deficient and are in need of resurfacing and base repairs. This will extend the life of the roadways, improve the level of service, increase safety, reduce risk and liability, and reduce maintenance costs. The proposed project listing, compiled on a neighbourhood basis, shall create attractive contract packages for the paving industry. This may result in potential cost savings and maximize the overall cost effectiveness of program delivery. CPMS 10881

**Description** Based on the OSIM bridge inspection and additional investigations completed, it has been determined that the existing bridge structure has become deficient and is in need of rehabilitation to extend the asset’s life and performance. This is intended to reduce the risk to public safety while maintaining continuity of the road network. CPMS 10800

**Description** The roadway has become surface deficient and is in need of rehabilitation strategies such as resurfacing and base repairs to improve ridability and public safety. This is intended to improve related levels of service while preserving the asset from further deterioration and reducing ongoing maintenance costs. This project is to be coordinated with the installation of a separated storm sewer system and watermain replacement. CPMS 10405

**Description** Based on the OSIM bridge inspection, the existing bridge structure has become structurally deficient. The structure became obsolete at the time of the closing of the north end of Blackheath Rd. This structure requires removal in order to ensure public safety and to eliminate unnecessary inspection and maintenance costs. CPMS 10768

Description

The roadway has become surface deficient and is in need of rehabilitation strategies such as resurfacing and base repairs to improve ridability and public safety. This is intended to improve related levels of service while preserving the asset from further deterioration and reducing ongoing maintenance costs. Condition assessment of subsurface appurtenances are completed and cleared. CPMS 11011

**Description** The roadway has become surface deficient and is in need of rehabilitation strategies such as resurfacing and base repairs to improve ridability and public safety. This is intended to improve related levels of service while preserving the asset from further deterioration and reducing ongoing maintenance costs. Condition assessment of subsurface appurtenances are completed and cleared.

**Comments**

**Description** The roadway has become structurally deficient and is in need of reconstruction to improve ridability and service level. This is intended to improve related levels of service while reducing overall risk, liability, and ongoing maintenance costs. This project is to be coordinated with watermain replacement.

**Description** The roadway has become surface deficient and is in need of rehabilitation strategies such as resurfacing and base repairs to improve ridability and public safety. This is intended to improve related levels of service while preserving the asset from further deterioration and reducing ongoing maintenance costs. Condition assessment of subsurface appurtenances are completed and cleared. Roadway rehabilitation is to be completed in coordination with the proposed two way conversion in accordance with the Downtown Master Plan.

**Description** The roadway has become surface deficient and is in need of rehabilitation strategies such as resurfacing and base repairs to improve ridability and public safety. This is intended to improve related levels of service while preserving the asset from further deterioration and reducing ongoing maintenance costs. Condition assessment of subsurface appurtenances are completed and cleared. CPMS 10096

**Description** The roadway has become surface deficient and is in need of rehabilitation strategies such as resurfacing and base repairs to improve ridability and public safety. This is intended to improve related levels of service while preserving the asset from further deterioration and reducing ongoing maintenance costs. Condition assessment of subsurface appurtenances are completed and cleared.

**Description** The roadway has become surface deficient and is in need of rehabilitation strategies such as resurfacing and base repairs to improve ridability and public safety. This is intended to improve related levels of service while preserving the asset from further deterioration and reducing ongoing maintenance costs. Condition assessment of subsurface appurtenances are completed and cleared.

**Description** The roadway has become surface deficient and is in need of rehabilitation strategies such as resurfacing and base repairs to improve ridability and public safety. This is intended to improve related levels of service while preserving the asset from further deterioration and reducing ongoing maintenance costs. Condition assessment of subsurface appurtenances are completed and cleared. Slope stabilization improvements in co-ordination with the Conservation Authority Niagara Escarpment Commission.

**Description** The roadway has become structurally deficient and is in need of reconstruction to improve ridability and public safety. This is intended to improve related levels of service while reducing overall risk, liability, and ongoing maintenance costs. Condition assessment of subsurface appurtenances are completed and cleared.

**Comments**

**Description** The roadway has become surface deficient and is in need of rehabilitation strategies such as resurfacing and base repairs to improve ridability and public safety. This is intended to improve related levels of service while preserving the asset from further deterioration and reducing ongoing maintenance costs. Condition assessment of subsurface appurtenances are completed and cleared.

**Description** The roadway has become surface deficient and is in need of rehabilitation strategies such as resurfacing and base repairs to improve ridability and public safety. This is intended to improve related levels of service while preserving the asset from further deterioration and reducing ongoing maintenance costs. Condition assessment of subsurface appurtenances are completed and cleared.

**Description** The roadway has become surface deficient and is in need of rehabilitation strategies such as resurfacing and base repairs to improve ridability and public safety. This is intended to improve related levels of service while preserving the asset from further deterioration and reducing ongoing maintenance costs. Condition assessment of subsurface appurtenances are completed and cleared.

**Description** The roadway has become surface deficient and is in need of rehabilitation strategies such as resurfacing and base repairs to improve ridability and public safety. This is intended to improve related levels of service while preserving the asset from further deterioration and reducing ongoing maintenance costs. Condition assessment of subsurface appurtenances are completed and cleared.

**Description** The roadway has become surface deficient and is in need of rehabilitation strategies such as resurfacing and base repairs to improve ridability and public safety. This is intended to improve related levels of service while preserving the asset from further deterioration and reducing ongoing maintenance costs. Condition assessment of subsurface appurtenances are completed and cleared. Roadway rehabilitation is to be completed in coordination with streetscaping.

**Description** The roadway has become surface deficient and is in need of rehabilitation strategies such as resurfacing and base repairs to improve ridability and public safety. This is intended to improve related levels of service while preserving the asset from further deterioration and reducing ongoing maintenance costs. Condition assessment of subsurface appurtenances are completed and cleared. Roadway rehabilitation is to be completed in coordination with streetscaping.

**Description** The roadway has become structurally deficient and is in need of reconstruction to improve ridability and service level. This is intended to improve related levels of service while reducing overall risk, liability, and ongoing maintenance costs. This project is to be coordinated with watermain replacement.

**Description** The roadway has become structurally deficient and is in need of reconstruction/urbanization to improve ridability and service level. This is intended to improve related levels of service while reducing overall risk, liability, and ongoing maintenance costs. This project is to be coordinated with watermain replacement and storm sewer upgrades.

**Description** The roadway has become structurally deficient and is in need of reconstruction to improve ridability and service level. This is intended to improve related levels of service while reducing overall risk, liability, and ongoing maintenance costs. This project is to be coordinated with watermain replacement and storm sewer upgrades.

**Description** The roadway has become structurally deficient and is in need of reconstruction to improve ridability and service level. This is intended to improve related levels of service while reducing overall risk, liability, and ongoing maintenance costs. This project is to be coordinated with watermain replacement and storm sewer upgrades.

**Description** The roadway has become structurally deficient and is in need of reconstruction to improve ridability and public safety. This is intended to improve related levels of service while reducing overall risk, liability, and ongoing maintenance costs. Condition assessment of subsurface appurtenances are completed and cleared.

**Description** Study to identify areas of concern and proposed remediation strategy. Redevelopment and remediation works to be implemented as per the priorities identified in the study.  
2023 - Geotechnical to begin on critical areas of the trail.  
2024 - Programming and prioritization of implementation of trail upgrades.  
2026 - Design development and construction of priority area 1.

**Comments**

DescriptionUpdate tree assessment data and overall risk ratings for public tree assets within the Urban Tree Inventory to ensure data is accurate and complete.

CommentsTo ensure a GIS database is complete for all City owned tree assets with up to date information for each. O. Reg. 588/17: ASSET MANAGEMENT PLANNING FOR MUNICIPAL INFRASTRUCTURE notes the requirement for an inventory of assets is required as part of the required long term infrastructure plans (within 10 years).

**Description** This project will implement a Priority Bus corridor on the A-Line segment of the BLAST Rapid Transit Network. It will include a combination of infrastructure improvements, transit signal priority and transit stop enhancements which will result in a faster, more reliable and more comfortable transit experience between Hamilton’s Waterfront, Downtown Hamilton and Hamilton International Airport. It will be a precursor to the ultimate Bus Rapid Transit (BRT) identified in the Ten Year Local Transit Strategy.

| <b>Description</b> | <p>The Macassa Lodge A wing was constructed in 1995 and is in need of a refresh through renovation of the bedrooms (including washrooms) to continue to meet the demands of our Residents and provide accommodation standards as outlined by the MOHLTC. Critical systems upgrades such as the HVAC unit are coming to the end of their useful life and will require replacement. Conduct a feasibility study in 2023 to identify any areas of risk or non-compliance with MOHLTC (or other) standards and determine the associated costs of renovation to remedy.</p> <p>*Cost of the project also includes a 6% project management fee which is being charged to the Division by Public Works for project management services.</p> |

**Description** Based on the OSIM bridge inspection and additional investigations completed, it has been determined that the existing culvert structure has become deficient and is in need of replacement. This is intended to reduce the risk to public safety while maintaining continuity of the road network. CPMS 11506

**Description** Implements the Ten Year Local Transit Strategy - There is a need to increase the shelter density of the conventional transit system by approximately 10 shelters per year over the next several years. There is also a need to add AODA compliant landing pads so that the completion target of 2025 can be met.

Description

Restoration of Municipal Fleet fuel sites.

Comments

Site redevelopment of 8 fuel sites that have surpassed their life expectancy. Tank reconditioning and painting.  
Site redevelopment of 8 fuel sites that have surpassed their life expectancy. Tank reconditioning and painting.  
Fuel sites to be redeveloped are 34 to 43 years old. Tank reconditioning and painting required after 10- 15 years to ensure integrity.

**Description** Based on the OSIM bridge inspection and additional investigations completed, it has been determined that the existing bridge structure has become deficient and is in need of rehabilitation to extend the asset’s life and performance. This is intended to reduce the risk to public safety while maintaining continuity of the road network. CPMS 11464

**Description** Based on the OSIM bridge inspection and additional investigations completed, it has been determined that the existing bridge structure has become deficient and is in need of replacement. This is intended to reduce the risk to public safety while maintaining continuity of the road network. Coordinated with Kenilworth Access to Upper Traffic Circle to Kenilworth resurfacing. CPMS 11505

**Description** The roadway has become structurally deficient and is in need of reconstruction to improve ridability and service level. This is intended to improve related levels of service while reducing overall risk, liability, and ongoing maintenance costs. This project is to be coordinated with watermain replacement. CPMS 10332

**Description** The roadway has become structurally deficient and is in need of reconstruction. Road reconstruction Ferguson; Foster and Walnut south of Charlton will improve the level-of-service, increase safety and reduce maintenance costs. This project is to be coordinated with watermain replacement. Note: Road rehabilitation on Patrick - Walnut to west end is funded by rates. CPMS 11791

**Description** The roadway has become structurally deficient and is in need of reconstruction to improve ridability and service level. This is intended to improve related levels of service while reducing overall risk, liability, and ongoing maintenance costs. This project is to be coordinated with watermain replacement and storm sewer upgrades. CPMS 11407

**Description** Based on the OSIM bridge inspection and additional investigations completed, it has been determined that the existing bridge structure has become deficient and is in need of rehabilitation to extend the asset’s life and performance. This is intended to reduce the risk to public safety while maintaining continuity of the road network. CPMS 10662

**Description** This bridge is situated along a Hamilton/West Lincoln shared boundary road. As per the "Joint Jurisdiction Highway Routine Maintenance and Repair Agreement", this bridge is maintained by West Lincoln. Capital works are to be cost-shared 50/50 between the Township of West Lincoln and the City of Hamilton. Based on West Lincoln's OSIM bridge inspection and additional investigations completed, it has been determined that the existing bridge structure has become deficient and is in need of replacement to extend the asset's life and performance. This is intended to reduce the risk to public safety while maintaining continuity of the road network. West Lincoln will be administering the contract for bridge replacement works. The allotted funding below, is for Hamilton's 50% cost-share of bridge replacement works. CPMS 10594

**Description** The roadway has become structurally deficient and is in need of reconstruction to improve ridability and service level. This is intended to improve related levels of service while reducing overall risk, liability, and ongoing maintenance costs. This project is to be coordinated with watermain replacement and storm sewer upgrades. CPMS 11484

**Description** The roadway has become structurally deficient and is in need of reconstruction. This will improve the level-of-service, increase safety and reduce maintenance costs. This project is to be coordinated with installation of a separated storm sewer system and watermain replacement. CPMS 10960

**Description** The roadway has become structurally deficient and is in need of reconstruction. In conjunction with the Southcote Road EA, the roadway requires reconstruction and urbanization to improve the level-of-service, operation and safety, as well as reduce maintenance costs. This project will include the rehabilitation of Southcote Rd "court". To be coordinated with new watermain installation. CPMS 11409

**Description** Road reconstruction required due to deteriorated road condition or required to facilitate sewer upgrades. This will improve the level-of-service, increase safety and reduce maintenance costs. This project is to be coordinated with sewer upgrades and watermain replacement. CPMS 11471

**Description** The roadway has become structurally deficient and is in need of reconstruction. This will improve the level-of-service, increase safety and reduce maintenance costs. This project is to be coordinated with watermain replacement and sewer upgrades. The limits of this project are within the Barton Village BIA therefore this project will include BIA service enhancements. CPMS 11486

**Description** The roadway has become structurally deficient and is in need of reconstruction. This will improve the level-of-service, increase safety and reduce maintenance costs. This project is to be coordinated with watermain replacement and sewer upgrades. The limits of this project are within the Barton Village BIA therefore this project will include BIA service enhancements. CPMS 11485

**Description** Parkland acquisition and growth development to improve the level service to the community (Winona). Community Park development once land is acquired. Park size 7.06 ha. Dependent on surrounding development timing.

**Comments** Half of the land has already been acquired and the budget request is for the remainder. No date known as of yet, as the park development is dependent on the surrounding development timing.. 2023 budget is land acquisition therefore no DC's needed, to be funded from Parkland Dedication Reserve. Land acquisition needed no later January 2025.
