| Description | One of two Air Pointer units owned by the City of Hamilton is no longer operational. This unit requires replacement. Air Pointer units have a projected life of 10 to 12 years.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
| Comments    | In 2014, City Council approved Ward 5 area-rating funding to be used to purchase two Recordum AirPointer units for monitoring air quality in two parks within the Ward (Minutes BOH14-003). Once monitoring was complete in Ward 5, the AirPointer units were relocated to other areas of the City where there were gaps in air quality monitoring, complaints, or sources of air pollutants throughout the City of Hamilton.                                                                                                                                                                                                                                                                                                                                                                            |
|             | The AirPointer units continuously measure respirable particulate matter (PM2.5), nitrogen oxide (NO), nitrogen dioxide (NO2), ozone (O3), and carbon monoxide (CO), which are all contaminants with known health impacts at high concentrations. Real-time data from the units is publicly available to view on the Hamilton Air Monitoring Network (HAMN) website. The data collected from the AirPointer units is recognized by the Ontario Ministry of Environment, Conservation and Parks (MECP) as reliable monitoring data. Members of the public are often directed to view data measured by the AirPointers in response to inquiries about local air quality. A formal report is also provided to the Health Hazards Program in Public Health Services once monitoring is complete at each site. |
|             | Although additional air quality monitoring data is also publicly available from monitors operated by HAMN and the MECP, these are stationary monitors that cannot be relocated to specific neighbourhoods as with the AirPointers.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
|             | The Health Hazards and Vector Borne Diseases program budgets \$44,800 annually to operate the two AirPointer units, which is 100% tax levy funded from dept. ID 674620.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
|             | Funded by GMO block funding from project 6502553101.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |

| <p><b>Description</b></p> | <p>On November 24, 2017 at the General Issues Committee, Council approved the first phase of an enterprise wide KRONOS implementation, with a goal to scope the design and implementation of a corporate time and attendance system, for the purpose of tracking and managing employee related costs related to absenteeism, overtime and establish a corporate standard for data tracking. In 2023, this first phase was completed, in consultation with Ernst &amp; Young. The review concluded that many departments are struggling to manage the workforce due to the use of outdated software and systems, with a heavy reliance on manual methods (Excel and email). There are issues with data management, integration between systems causing delays and errors, impacting payroll process and affecting employee pay. This Phase One review concluded that UKG Dimensions would provide a core synchronized system of scheduling and time &amp; attendance to streamline workflow, reduce costs, eliminate redundancies, and enhance productivity. UKG Dimensions would provide a modern, cloud-based solution to both optimize existing processes, while adding new features and capability. KRONOS is currently being used in Public Health, Hamilton Water and Lodges with great success. Expanding the use of UKG Dimensions across all Departments will support Council's direction to provide more accurate data and reporting relative to overtime and premiums, but also support the City's ability to leverage a unified scheduling and time keeping process across the organization to achieve a significant return on investment and gain a competitive advantage in our industry, improving the employee experience.</p> |
| <p><b>Comments</b></p>    | <p>Amendment to the above description - RFP issuance in 2025 delayed, which will result in project extension into 2028</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |

Description

3 temporary staff members for a period of two years to address the 80,000-plus documents currently on City websites, which can be remediated through proper document preparation, moving the document to an HTML format or to removing the document from the City’s website altogether. Areas of focus includes:

- Guidance for procurement of IT solutions
- Web content review/development
- Testing & remediation
- Compliance audits & reporting
- Training & knowledge sharing

| <b>Description</b> | <p>Proficio, a Collections Management System, was lost due to a recent cyber incident, leaving the Tourism and Culture Division in urgent need of a replacement solution. This project aims to purchase and implement a new Collections Management System to restore essential services for the Heritage Resource Management Section (Which has been renamed to Museums &amp; Heritage as of October 1, 2025). The new system will help manage and preserve cultural heritage resources effectively, ensuring continuity and enhancing operational efficiency. The Hamilton Civic Museums are held to the Core Standards for Canadian Museums. This project ensures funds are withheld for staffing purposes, as data from the Civic Museums must be added to Argus and can take years to complete. The new system will enhance access to the collections, asset management practices adherence to museum core standards.</p> |
| <b>Comments</b>    | <p>"1. The Procurement of the Software is complete, but the costs are on-going until 2029 to support data entry.</p> <p>2. Costs over 4 years are to support the staff and project to regain physical and intellectual control of the City's historical collections. Data entry will take months to a year to complete in full as there are over 8 sites.</p> <p>3. As per IT Project Charter (24-0061) - once the portal is live for staff use, the IT Project Charter is complete. But this is not reflective of the scope of the project which include 4 years of funds.</p> <p>4. A Business Unit Project Charter was created to expand the project passed initial staff use, into data entry, public use, and marketing efforts.</p> <p>5. A MAP Grant was awarded to Heritage Resource Management (Museums &amp; Heritage) for \$50,000.00 for this project. "</p>                                                      |

**Description** CoH is consolidating the various Asset Management solutions into a single SaaS solution Hexagon EAM - implementing one system to replace the existing 11 systems within Public Works. This system manages the life cycle of the city's physical assets to maximize value, including the design, construction, commissioning, operations, maintenance and decommissioning/replacement of plant, equipment and facilities.

|---------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Description</b>                    | Upgrade of head end operating software (KeyScan - System 7) that is used to control card access City-wide, to the new supported operating software of KeyScan - Aurora, on IT infrastructure virtual servers. Replacement of existing in-field controllers and equipment that connect to System 7, but are not compliant to the new upgrade to Aurora (approximately 60% of in-field controllers). |
| <b>Comments</b>                       | CM24004(a)                                                                                                                                                                                                                                                                                                                                                                                         |

| <b>Description</b> | <p>The City is committed to promoting an open and transparent approach to government, including ensuring data and service performance information and tools are readily available, accessible and sustainable. This request is to acquire and implement the necessary infrastructure, including a data hub/lake to support data sharing and the open data program, organizational performance management and drive a culture of continuous improvement and innovation. This critical infrastructure supports data to be quickly and easily accessed by all stakeholders such as Council, staff, citizens and researchers. Automation will reduce manual processes so that data can be leveraged to make decisions and create a more open and transparent government. Having data that is easy to access helps support a culture of analysis, transparency and data driven decision making. Enabling automated access will make it easier for staff to find information they need. It also enables enhanced availability to the community.</p> |
| <b>Comments</b>    | <p>The first pilot of the Citizen Dashboard is launching in fall of 2017. It is a webpage with limited functionality for real-time, automated updates, and has limited drill-down data capabilities. Automating these processes is critical to having a public facing and internal dashboards and sustainable open data program. The program also recognizes the potential for future revenue generation modeling once the automated open data program is in place. Enabling this service enhances both trust in government as well as the experience of the residents, community partners, and businesses. 1 FTE and 125k was approved in 2018.</p>                                                                                                                                                                                                                                                                                                                                                                                          |

**Description** The Digital Office was established to lead digital transformation at the City. This funding is to establish the full program that focuses on modernizing service delivery digitally, Open Government and orchestrating smart city initiatives and expand the way we engage with the community, academia and the private sector, including co-creation. It will work with departments/divisions to make services available on-line that are simple and easy to use; increase the use digital tools to make the City more responsive/predictive and enable residents to have easier access to services and information/Open Data. This initiative will also pilot up to five initial smart projects on a connected platform to demonstrate the impact of combining data to drive decisions. (2 temporary FTE's inclusive of operating equipment costs funded from the reserve for 2019 and 2020 in the amount of \$200k annually)

| <b>Description</b> | To replace "Legend" end of life POS application for 11 business units based on recommendations from a 2023 discovery project. The discovery project collected requirements from current Legend users, shared requirements and collected additional feedback from non Legend users and reviewed Legacy applications including emerging City solutions such as Xplor and Microsoft Commerce. The outcome of the review will be a recommendations for an existing application or a "Go to Market" approach. This funding would support the implementation of the outcome of the review. |
| <b>Comments</b>    | Resources are required at the start of this project in IT (1.5 FTE) to support project management and business analysis and in Customer Service (0.5FTE) to support stakeholder engagement and process mapping.                                                                                                                                                                                                                                                                                                                                                                      |

## 3502557001 - Automated Vehicle Locator Software Replacement

|                    |                                                                                                                                                                                                                                                                                                                                                                                                                                                |
|--------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Description</b> | The contract for the current enterprise Automated Vehicle Locator technology solution ends in Q1 of 2026. The current solution has a significant number of functional deficiencies that can not be addressed by the current service provider. This costs associated with this request will fund the acquisition, implementation, and ongoing operational costs of a replacement solution which includes both hardware and software components. |
| <b>Comments</b>    | The City's current contract for Automated Vehicle Locator software expires in January 2026. City will need to issue a Request for Proposal to acquire a new software solution that meets the needs of all divisions that leverage the current software solution.                                                                                                                                                                               |

| Description                        | 'NG9-1-1 equipment refresh including the servers and networking equipment in Core A, Core B, the Training Core, and 60 Solacom computers. This is to ensure that the hardware is new and updated to ensure that there is little risk of failure.                                                    |                                   |                                     |                 |          |
| Comments                           | With Hamilton Fire Department and Hamilton Police Service moving to a 2-site model, the survivability controller will not need to be replaced, these cost savings have been reflected but the cost projections are based on current prices and might have to be indexed/refined closer to the date. |                                   |                                     |                 |          |

| Description                        |                           | 'NG9-1-1 equipment refresh including the servers and networking equipment in Core A, Core B, the Training Core, and 60 Solacom computers. This is to ensure that the hardware is new and updated to ensure that there is little risk of failure.                                                    |                                     |                 |          |
| Comments                           |                           | With Hamilton Fire Department and Hamilton Police Service moving to a 2-site model, the survivability controller will not need to be replaced, these cost savings have been reflected but the cost projections are based on current prices and might have to be indexed/refined closer to the date. |                                     |                 |          |

**Description**      Consultancy services to conduct a review and provide suggested changes to the City's competitive procurement templated documents. The consultant engaged will: perform a benchmark analysis to compare the City of Hamilton to other, similar municipalities; indicate more succinct and efficient processes in how to conduct competitive procurements; review the use of any applicable AI solutions to assist bidders with submitting tenders to the City; do an overall scan of trade agreement and legislated obligations that the City needs to comply with when performing procurements. After the analysis the consultant will provide suggested changes to the current templated language being used in document including the use of more plainer language and the elimination of legal-ease so that bidders and the general public are able to understand the competitive procurement documents, understand the requirements and be able to submit their bids successfully. When completed, the project will result in: more bids being submitted by vendors; less questions posed during the procurement process for clarification; more efficiency with issuing up to date, templated documents and ultimately more confidence in the City of Hamilton's procurement processes as a whole – aligning with both the City's Strategic Plan Priority of “Our People & Performance” and the City's Cultural Pillar “Courageous Change” and “Sensational Service”.

Description

The Birch Bus Terminal depot is being constructed to facilitate the growth in the number of busses and increased need for maintenance facilities required to maintain the City of Hamilton fleet and staff supporting the HSR services.

IT is providing Network Connectivity for both LAN and Wireless services required at the facility. The services required at the facility is contractual. IT is providing critical infrasture to the bus terminal like internets, lan and per contractuels obligations.

| Description                        | <p>Consultancy services to develop and execute a proof of concept and pilot initiative for integrating social value procurement into the City’s competitive procurement processes. The consultant engaged will: build upon the completed jurisdictional scan to design and implement a targeted proof of concept and pilot across selected procurement categories; lead internal and external engagement and consultation activities to ensure broad stakeholder input and buy-in, including workshops with City staff and outreach to vendors and community organizations; develop a comprehensive change management plan to support internal readiness and adoption; and create plain-language materials to support understanding and participation throughout the pilot.</p> <p>The consultant will also produce all necessary support materials, including updated procurement templates, training guides, and communication tools, to facilitate both the pilot and future implementation. Following the pilot, the consultant will analyze outcomes using defined performance metrics and provide a detailed report outlining key findings, lessons learned, and recommendations. This report will inform the development of a phased roll-out strategy for city-wide adoption, including timelines, deliverables, governance structures, and mechanisms for ongoing monitoring and evaluation.</p> <p>When completed, the project will result in: a tested and validated social value procurement model with measurable outcomes; improved clarity and consistency in procurement documentation; enhanced staff capacity through training and support; and stronger alignment with the City of Hamilton’s Strategic Plan Priority of “Our People &amp; Performance” and Cultural Pillars of “Courageous Change” and “Sensational Service.</p> |                                   |                                 |                 |      |

| <b>Description</b> | <p>"The Integrated Court Offences Network (ICON) is the provincial database currently utilized by the Ministry of the Attorney General (MAG) to house information pertaining to all offences, court cases and trials. Specifically, the City's Provincial Offences Administration (POA) unit records information directly into the data base for all provincial offences. ICON is not mandated by the Ministry; however, information must be updated in the ICON system daily as the Ministry uses the database to report performance and for other decision-making purposes. ICON is approximately 50 years old and based on unsupported and outdated technology. The Ministry remains responsible for technically supporting the technology and has attempted to replace the outdated technology unsuccessfully in the past. As an example, it took two years for POA Hamilton to have an additional three-digit code added to the existing data tables.</p> |
|--------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|

In conjunction with ICON, POA also utilizes a second database, Court Administration Management System (CAMS) to address the shortfalls (ex. Notes) in the ICON technology. This results in several work arounds, manual processing and keying of entries in two systems. CAMS was developed by Niagara Region and is supported by Niagara on a limited basis. As CAMS is also built on an unsupported and outdated platform (.Net older version/SQL), Niagara has notified the City that the program will not be supported beyond 2019. A team comprised of ICON and CAMS municipal users is focused on replacing both outdated systems

| <b>Description</b> | On June 1st, 2017, the CRTC mandated all telephone companies to update their networks to provide Next-Generation 9-1-1 voice and text messaging services to all Canadians by March 30th, 2024. The City of Hamilton's IT Division, in conjunction with the Hamilton Police Service (HPS), Hamilton Fire Department (HFD), Hamilton Paramedic Service will lead the technical components of this initiative. PSAPs will no longer be able to take 911 calls after March 30th 2024 without the required NG9-1-1 technology to deal with 911s in the new format. HPS will be required to update and replace their systems in order to have compatibility to receive 911 calls and transfer them accordingly. This Capital will cover hardware and software costs, implementation, training, as well as an external Project Manager. This upgrade will have a direct impact on HPS, HFD, and Emergency Services dispatch. |

| Description | To support the upgrade to the newest cloud-based budgeting software version of the platform which will result in enhanced features as well as seamless upgrades and technical patches. In addition, the initiative will allow for the comprehensive review of processes and procedures to identify areas of efficiency and enhancements as well as the commissioning and launch of in-real-time financial dashboards (using visualization tools), enhance reporting and presentment of information which will support the City's budget process and open data initiative. The review will also support the enhancement of financial performance reporting as well as provide the City the opportunity to utilize statistical measures and automated calculations. |

**Description**

Funds are required to refresh IT technology (such as network switches, etc) that is at end of life and to mature and scale IT infrastructure equipment and software to manage growth and business needs.

This capital program will help mitigate the risk of failure and supportability to infrastructure equipment and software where it is past it's useful life and purpose(s). The risk of not replacing this technology is loss of connectivity to critical applications, communications and network resources, which results in the loss of productivity or ability to provide services including emergency responders. The captial also includes any professional services needs to implement these infrastructure technologies if/when required.

This capital budget also provides funding for backup power devices at most sites. This will provide continuous power when power interruptions occur, to maintain site network connectivity.

**Description**

"Professional Services required to:

- Migrate current Address Information Mgmt System software to the standard spatial services platform ESRI
- Complete analysis work required to enter into an enterprise license agreement with or standard vendor ESRI
- Complete analysis work and preparatory work (including developing a cost estimate for future capital needs) for acquisition of Master Data Management software (software that will be the central repository for core city datasets - this repository will store datasets, business rules for those datasets, data cleansing rules for those datasets, data sharing rules, etc)
- Software (subscription) licensing for Teranet Exchange - (this will provide nightly updates of Spatial data as opposed to bi-monthly updates, ensuring improved accuracy of the city's spatial data)
- Data (subscription) licensing for Teranet property data - this will provide property ownership information that can be used in some cases to replace MPAC data, given that there are contractual constraints and limitations for the use of MPAC data

"

**Description** 'The Call Handling review (2014) was directed by Council. The outcome of the review was to facilitate the consolidation of calls from the various departments and divisions to the Customer Contact Centre (546 - CITY), thereby simplifying telephone access to City services and information. September 2017 marked the commencement of the call consolidation process. Fast-forward, in 2022, it is estimated that the last of the identified services will be consolidated, thereby bringing the call consolidation program to completion. With respect to the technology, in 2021, the City was advised that the CRM software is nearing its end-of-life, as such, a review of the current vendor’s CRM platform along with existing technology (and licensing) was initiated to determine the replacement path. A cross-functional team was formed to explore the opportunity to utilize existing platforms which contain CRM capabilities. The objective is to utilize an existing platform that successfully addresses the requirements (IT, Security and Operational) and is comparable, or net better, in annual licensing and servicing fees. Without this important upgrade, the Customer Contact Centre will be constrained in its ability to successfully expand its call service as well as on-line service delivery (for those services utilizing the current CRM). Coupled with this work, the City will implement the requirements for the adoption of a 311 Customer Service number for City of Hamilton services (Motion was approved by GIC for 311/CRM Sept 2022).

|-------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Description | This project was created due to the fact that the Ancaster Expansion project was cancelled by the SLT of HPL and brought forth for Board approval in Sept 2025. The Board motioned and approved the cancellation of project number 7502741100 in the amount of \$10M. In exchange for that cancellation it was decided to renovated the existing premises. |
| Comments    | This project will be conducted in two phases with two different project numbers the first part of the project will commence if approved in 2026 costing \$700k the second phase of the project will commence in 2031 costing \$1.5M                                                                                                                        |

| <b>Description</b>                        | To modernize the existing branch at Saltfleet as opposed to a large move and brand new structure                                                                                                                                                                                                                                                                                                                                                               |                                          |                                             |                        |          |
| <b>Comments</b>                           | The Saltfleet renovation project was created to compensate for the cancellation of the Saltfleet Move to Stoney Creek project set to commence in 2028. This project was forecasted to cost \$19.4M. The SLT of HPL decided it was financial prudent at this time to renovated the existing premises for \$750k as opposed to a brand new facilities. The concept was taken to the board in Sept 2025 and passed. All parties agreed it was better to renovate. |                                          |                                             |                        |          |

| <b>Description</b>                        | A Tech room refresh is required at the Central library of HPL - the facilities are outdated and in needed of restoration.                                                                                                                                                                                                                                                           |                                          |                                             |                        |      |
| <b>Comments</b>                           | A Tech room refresh is required at the Central library of HPL - the facilities are outdated and in needed of restoration. The SLT team of HPL had decided to forego \$44M from the 10 year capital funding to support initiatives that are more cost effective. At the present time there has been no allocation from HPL reserve funds for this project that is critically needed. |                                          |                                             |                        |      |

**Description** This is a project that will allow the Children's area at the Central library location to be moved upstairs. Creating a large safer environment for the young members of Hamilton. The current lower layout of HPL is posing to be uncomfortable and possibly unsafe as the continuance of drug use and other factors occur. During this expansion it is also hoped to incorporate a 5th floor expansion for the admin staff to make the 5th more efficient.

**Comments** The HPL - SLT along with its board have decided to make the renovations of the children's area a project. Currently the children's area is on the lower floor. The lower floor is a walk-thru from one side of Jackson to York and the foot traffic is very high. Combated with the occurrence of drug use and people being unconcious due to drug use.

|-------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Description | Local History and Archives Project was a project that was to be launched several years ago to enhance the archive collections. The project number has since been cancelled - 7502641300. A SLT -HPL and board decision has been made to bring back this project.                                                             |
| Comments    | An in-depth review was done for the 2026 capital plan of HPL and it was decided that \$44M should be taken deducted. The goal was to restore and renovate the existing facilities and branches. A copy of the 10 year capital plan along with the board motion and acceptance are present within the attachments for review. |

| Description | The growth area of Upper Stoney Creek once rural, became suburban upon amalgamation of the City in 2000. However, over the years this area has transitioned into predominately urban, and with recent changes to expansion rules this growth is increasing exponentially. The increased risk profile generated by the growth that has already occurred has not been addressed through an increase in resources, and future growth and accompanying risk must equally be planned for . As a composite response area, Upper Stoney Creek has challenges converging an effective firefighting and rescue force (EFRF) response as a result of location/geography, volunteer staffing response levels, and out-of-area support to volunteer responses. The construction of a new Station 14 will support Upper Stoney Creek as a Composite response area in conjunction with reversion of Station 17 to a Full-time only station. New Station 14 will amalgamate the volunteer crews and apparatus from exisiting Stations 14 & 17 and house a net new Volunteer Pumper as well as a Full-time Urban Engine. This future build will be located on a parcel of land already owned by the City in anticipation of this region's growth. As per the findings of the 10 Year Fire Service Delivery Plan approved by Council in June 2019 (HSC19026). |

Description

Due to the growth and intensification of the harbour front area of the City, Station 6 requires renovations and the addition of another apparatus bay. This is to accommodate a net new fire apparatus and 20 full-time firefighters. Renovations will focus on modifications and improvements necessitated by growth related expansion of the existing facility, including functional work/living quarters, training areas, accessible, gender neutral washrooms, appropriate cleaning and storage areas for personal protective equipment and supplies, and HVAC/infrastructure upgrades. As per the findings of the 10 Year Fire Service Delivery Plan approved by Council in June 2019 (HSC19026).

Comments

Estimated construction 2030-2031.

**Description** Health and human Service Integration has been a priority for the city and we will use this funds to improve coordination of services between community partners and city divisions with the goal of improved outcomes in the area of access, coordinated care and reduced duplication and fragmentation in priority areas which could include mental health and addiction sector, or other based on community input and identified need.

**Comments** \$160k block funding previously allocated to project 6502141100 is no longer necessary in 2025 and moved to this project. Funding amounts agree to block funding budget guideline for HSC Admin.

\$135k block funding allocated in 2026 to project 6772051102 for PHS purchase of an Air Pointer.

**Description** Ambulances and Emergency Response Vehicles (ERV) are highly specialized vehicles, built to Ministry-mandated specifications. Paramedic Service Vehicle replacement is based on a 6 year cycle but due to the ongoing wait times for ordering these specialized vehicles Paramedic services will order replacement vehicles 18-24 months ahead to be able to meet replacement timelines when they occur per the Ministry standards and equipment life cycle. The Hamilton Paramedic Service replaces ambulances and ERV on a six year average cycle, which is on the longer side of industry standards.

**Description**      Ancillary Paramedic equipment is purchased based on MOH Equipment Standards and equipment life cycles. 2026 requirements include lifecycle replacement of PAD Defibrillators, Auto Pulse, and other general medical equipment. All equipment replacement in the capital program is scheduled in accordance with the long-term capital plan which includes an ongoing increase in contributions from the 50% MOH-funded Operating Budget to capital reserves.

| <b>Description</b> | <p>The capital budget submission outlines several key areas of focus for the Hamilton Paramedic Service (HPS), detailing the allocation of funds for continuing operations.</p> <p>Continued Station Facility Improvements:<br/>Well maintained, safe Paramedic Response Stations (PRS) are a vital part of positive workplace culture. A portion of the funding will be used to provide necessary maintenance and repairs to existing PRSs, with some funds being used to move forward feasibility studies for future facilities.</p> <p>Operational Adaptability:<br/>With increasing call demands for paramedic services, combined with limited space at existing stations to store vehicles, Hamilton Paramedic Service has been required to leave vehicles outside while idling. The reason for this is to ensure vehicles are deployed into appropriate locations to minimize response times to 911 calls, while ensuring temperature compliance with manufacturer's instructions surrounding medical equipment and supplies. To offset this, Hamilton Paramedic Service will use funds to continue its installation of solar panels, which in turn will reduce the need to idle vehicles and result in a reduction of gas emissions and noise pollution. Additionally, with longer production times of ambulances, HPS will use some funds to procure an additional spare ambulance. This will ensure continuity of service while primary vehicles are out of service for mechanical maintenance, repairs and other unforeseen circumstances.</p> |

**Description** The equipment replacement schedule is based upon the life expectancy of various Hamilton Fire Department (HFD) needs in conjunction with an ongoing assessment of equipment condition. Based on this schedule, in 2026 HFD requires various equipment replacement including personal protective equipment, bunker gear extractors, medical related equipment, SCBA components, firefighting hose/appliances, power tools, alerting/notification equipment, portable radios, other technical rescue equipment, mechanical equipment, and specialized and remotely piloted aircraft systems.

**Description** The HFD vehicle replacement schedule is based upon industry standards in conjunction with an ongoing assessment of vehicle serviceability and overall condition. HFD monitors market conditions vs. operational needs to determine if replacements can/should be accelerated or deferred if more favourable for the City pending Council approvals. It should be noted that procurement lead times for delivery of specialized fire apparatus continues to vary significantly. In some instances, lead times have approached 36 months from the time a purchase order is issued. HFD has used Council approved spot buy authority and cooperative buying initiatives in consultation with procurement in order to expedite acquisition times to maintain operational needs. In 2026, the budgeted capital replacement schedule-vehicle, forecasts the acquisition of 4 Tankers and 1 Engine/Pumper, 1 Fire Prevention small size vehicles and 1 Mechanical maintenance vehicle.

| <b>Description</b> | <p>The Hamilton Fire Department is seeking approval to acquire two (2) fire response support vehicles to enhance frontline service delivery and meet evolving operational demands. The intended vehicle types will be response-rated pickup trucks, fully equipped with emergency lighting, communications and technology systems with essential fire and medical response equipment. These vehicles will support a wide range of emergency incidents, including structure fires, medical calls, and other operations. To ensure timely and cost-effective procurement, the Department will continue to pursue cooperative buying initiatives or Council-approved authorities, in consultation with Procurement, due to variable lead times and ongoing supply chain challenges within the marketplace.</p> |

|                    |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
|--------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Description</b> | <p>This project proposes the relocation and expansion of the Hamilton Fire Department’s Stores warehousing operations to a new structure to be built at the Multi-Agency Training Centre (MATC) campus. The current warehousing space, co-located with Paramedic Services at Victoria Avenue, has been in use for over 20 years, and this facility is currently undergoing renovations that will further reduce the available fire-designated use area. Despite efforts to optimize efficiency, the Fire Department has outgrown the shared space and urgently requires a dedicated facility to support fire-specific inventory and logistics in the setting of increasing operational demands and requirement for deployment readiness.</p> |

**Description** Major growth and development in Hamilton is occurring in former neighbouring municipalities in the suburban/rural areas of Hamilton including Winona which are undergoing development or plans for development to accommodate the increasing population. To increase the ability to achieve effective firefighting and rescue force (EFRF) thereby enhancing operational effectiveness and mitigating risk, HFD forecasts implementation of a five-person day crew during the week. These changes will be monitored to assess their effectiveness and to identify any resources gaps needed to mitigate increased risk however it is projected that there will be a future need to renovate Station 16 to a composite station to accommodate the addition of a full time crew, 24 hours per day and 7 days a week. As per the findings of the 10 Year Fire Service Delivery Plan approved by Council in June 2019 (HSC19026).

|--------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Description</b> | <p>The recommendation for a new Fire Station to support the growth in Waterdown was implemented pre-amalgamation and is now positioned as a suburban area. The increased risk profile generated by the existing growth has not been addressed through an increase in resources. Currently a composite response area, Waterdown has challenges converging an effective firefighting and rescue force (EFRF) response due to location/geography, volunteer staffing response levels, and out-of-area support to volunteer responses. HFD is in process of establishing a new station in Waterdown in partnership with Hamilton Police Services. The vision of relocating full time HFD resources from the existing Parkside location will complete the transition of the day crew to a second full time crew operating 24 hours a day, seven days a week. This project aligns with the findings of the 10 Year Fire Service Delivery Plan approved by Council in June 2019 (HSC19026).</p> |

**Description** This project is to support the continued operations at the existing Station 24 location on Parkside Drive in Waterdown, that will become a Volunteer only station upon the completion of the new (second) Waterdown station. The rehabilitation/renovation of the existing facility will help to satisfy health and safety and/or operational needs. This will work will ensure that the required accommodations are available for the Volunteer staff including, office space, training/meeting facilities, washroom/locker room with appropriate gender capacity, appropriate equipment storage areas, appropriate areas for the decontamination of firefighting personnel protective gear and station wear post incident and ventilation systems to minimize exposure emissions.

**Description** Mechanical Operations requires a facilities review to relocate to an existing or surplus City property. Working with Corporate Real Estate, ideally a location could be identified for sole or co-occupation with other COH departments and could be assumed following appropriate renovations that would provide cost savings compared with a new facility build. A consolidated Mechanical Division would address current space limitations at Station 13 to perform repair and preventative maintenance on Fire and Paramedic fleet vehicles. Currently, there are only four bays for large apparatus, and when these are occupied by vehicles that require major work that take time, mechanics are forced to work outside on apparatus that will not fit into the additional smaller three bays. This becomes a greater challenge in the winter months as vehicles cannot be left outside in the cold for prolonged periods as water contained within fire apparatus can freeze causing significant pump damage. Freezing is also problematic for medications stored in ambulances - rendering them ineffective. As per the findings of the 10 Year Fire Service Delivery Plan approved by Council in June 2019 (HSC19026).

| <b>Description</b> | <p>The growth area of Upper Stoney Creek once rural, became suburban upon amalgamation of the City in 2000. This area surrounding Station 17 transitioned into predominately urban and is currently resourced as a Composite Fire Station housing both Full-time (24-hour and day crews) and Volunteer apparatus and crews. The increased risk profile generated by the growth that has already occurred has not been addressed through an increase in resources. As a composite response area, Upper Stoney Creek has challenges converging an effective firefighting and rescue force (EFRF) response as a result of location/geography, volunteer staffing response levels, and out-of-area support to volunteer responses. To address this, HFD will revert Station 17 to a Full-time only Fire Station, and will relocate Volunteer apparatus and crews to the proposed New Station 14 - Upper Stoney Creek, maintaining Composite response ability in the Upper Stoney Creek area. Renovations to Station 17 will focus on modifications and improvements to functional work/living quarters, training areas, accessible, gender neutral washrooms, appropriate cleaning and storage areas for personal protective equipment and supplies, and HVAC/infrastructure upgrades. As per the findings of the 10 Year Fire Service Delivery Plan approved by Council in June 2019 (HSC19026).</p> |

**Description** Due to the growth and intensification of the West Hamilton / Dundas area of the City, Station 10 will be reconfigured/renovated to support an additional net new fire apparatus and 20 full-time firefighters. Renovations will focus on modifications and improvements necessitated by growth related reconfiguration of the existing facility, including functional work/living quarters, training areas, accessible, gender neutral washrooms, appropriate cleaning and storage areas for personal protective equipment and supplies, and HVAC/infrastructure upgrades. As per the findings of the 10 Year Fire Service Delivery Plan approved by Council in June 2019 (HSC19026).

Description

With a variety of health care issues in the community including most recently COVID19, COH Public Health and Hamilton Paramedic Service look to partner to invest in software that will harness, coordinate and analyse available data to provide real-time health issues in the community. With a strong partnership between these 2 organizations for several years, this progressive approach will look to better serve our residents, by actioning real-time issues.

Comments

Expenses to be shared 50% with COH Public Health as a partnership project.

**Description** Inadequate space is currently available in existing Paramedic and shared (Fire/Paramedic) stations to allow for the indoor stationing of all Paramedic Ambulances and Emergency Vehicles as required by the Ministry of Health. Longer-term solutions are included in the Service 10- year plan, but as an interim solution this project will increase the capacity of existing Station 32 by installing two garage bay doors, paved access and requisite upgrades to current code requirements to allow for the stationing of five Ambulances and one Emergency Response Vehicle (1 additional vehicle bay).

| Description | Hamilton has approximately 14,000 units of social housing administered through 42 different housing providers. Housing quality is as important as its availability and affordability. Housing that does not meet health and safety standards and is in need of repairs is referred to as inadequate housing. Outcome #4 of the Council approved 10 year Housing and Homelessness Action Plan is that people live in housing that is good quality, safe and suitable for their needs. The 2025. capital repairs and regeneration call for applications (CFA) will support specific Building Condition Assessment outcomes or other subsequently identified needs such as energy related repairs / regeneration . Social Housing will issue the CFA, evaluate and award funding competitively based on need (BCA) and impact (reduction of waitlist and preservation of housing assets). |
| Comments    | On September 10, 2014, Council received Item 4 of Emergency & Community Services Committee Report 14-005 regarding Social Housing Reserve Fund Studies. Housing Services is assessing the condition of Hamilton's social housing stock and provider reserves, prioritizing buildings most urgently requiring a Building Condition Assessment (BCA) and the financial support to perform building repairs. The province did not continue its Social Housing Renovation and Retrofit Program (SHRRP) after 2011, which had provided \$33.7 million to the City for capital repairs and regeneration for social housing providers. This capital budget request will effectively renew the funds available which will leave an approximate deficiency of \$630M remaining for 2025 to 2034.                                                                                                |

**Description** Report FCS12024 recommended that a capital project be created for, and funded by, each of the 8 Ward Special Capital Reinvestment Reserves, in the amount of \$100,000, to be used in the respective Ward to fund in year infrastructure priorities. This project will provide some financial capacity to affected Ward Councillors in funding in year infrastructure and/or one-time funding requirements, with no associated operating impacts, that are not of the financial scale that would otherwise be considered through the capital budgeting process. Examples of such investments may include: historical plaques, small beautification projects and onetime maintenance initiatives, to name a few.

**Description** Report FCS12024 recommended that a capital project be created for, and funded by, each of the 8 Ward Special Capital Reinvestment Reserves, in the amount of \$100,000, to be used in the respective Ward to fund in year infrastructure priorities. This project will provide some financial capacity to affected Ward Councillors in funding in year infrastructure and/or one-time funding requirements, with no associated operating impacts, that are not of the financial scale that would otherwise be considered through the capital budgeting process. Examples of such investments may include: historical plaques, small beautification projects and onetime maintenance initiatives, to name a few.

**Description** Report FCS12024 recommended that a capital project be created for, and funded by, each of the 8 Ward Special Capital Reinvestment Reserves, in the amount of \$100,000, to be used in the respective Ward to fund in year infrastructure priorities. This project will provide some financial capacity to affected Ward Councillors in funding in year infrastructure and/or one-time funding requirements, with no associated operating impacts, that are not of the financial scale that would otherwise be considered through the capital budgeting process. Examples of such investments may include: historical plaques, small beautification projects and onetime maintenance initiatives, to name a few.

**Description** Report FCS12024 recommended that a capital project be created for, and funded by, each of the 8 Ward Special Capital Reinvestment Reserves, in the amount of \$100,000, to be used in the respective Ward to fund in year infrastructure priorities. This project will provide some financial capacity to affected Ward Councillors in funding in year infrastructure and/or one-time funding requirements, with no associated operating impacts, that are not of the financial scale that would otherwise be considered through the capital budgeting process. Examples of such investments may include: historical plaques, small beautification projects and onetime maintenance initiatives, to name a few.

**Description** Report FCS12024 recommended that a capital project be created for, and funded by, each of the 8 Ward Special Capital Reinvestment Reserves, in the amount of \$100,000, to be used in the respective Ward to fund in year infrastructure priorities. This project will provide some financial capacity to affected Ward Councillors in funding in year infrastructure and/or one-time funding requirements, with no associated operating impacts, that are not of the financial scale that would otherwise be considered through the capital budgeting process. Examples of such investments may include: historical plaques, small beautification projects and onetime maintenance initiatives, to name a few.

**Description** Report FCS12024 recommended that a capital project be created for, and funded by, each of the 8 Ward Special Capital Reinvestment Reserves, in the amount of \$100,000, to be used in the respective Ward to fund in year infrastructure priorities. This project will provide some financial capacity to affected Ward Councillors in funding in year infrastructure and/or one-time funding requirements, with no associated operating impacts, that are not of the financial scale that would otherwise be considered through the capital budgeting process. Examples of such investments may include: historical plaques, small beautification projects and onetime maintenance initiatives, to name a few.

**Description** Report FCS12024 recommended that a capital project be created for, and funded by, each of the 8 Ward Special Capital Reinvestment Reserves, in the amount of \$100,000, to be used in the respective Ward to fund in year infrastructure priorities. This project will provide some financial capacity to affected Ward Councillors in funding in year infrastructure and/or one-time funding requirements, with no associated operating impacts, that are not of the financial scale that would otherwise be considered through the capital budgeting process. Examples of such investments may include: historical plaques, small beautification projects and onetime maintenance initiatives, to name a few.

**Description** Report FCS12024 recommended that a capital project be created for, and funded by, each of the 8 Ward Special Capital Reinvestment Reserves, in the amount of \$100,000, to be used in the respective Ward to fund in year infrastructure priorities. This project will provide some financial capacity to affected Ward Councillors in funding in year infrastructure and/or one-time funding requirements, with no associated operating impacts, that are not of the financial scale that would otherwise be considered through the capital budgeting process. Examples of such investments may include: historical plaques, small beautification projects and onetime maintenance initiatives, to name a few.

**Description** Report FCS12024 recommended that a capital project be created for, and funded by, each of the 8 Ward Special Capital Reinvestment Reserves, in the amount of \$100,000, to be used in the respective Ward to fund in year infrastructure priorities. This project will provide some financial capacity to affected Ward Councillors in funding in year infrastructure and/or one-time funding requirements, with no associated operating impacts, that are not of the financial scale that would otherwise be considered through the capital budgeting process. Examples of such investments may include: historical plaques, small beautification projects and onetime maintenance initiatives, to name a few.

**Description** Report FCS12024 recommended that a capital project be created for, and funded by, each of the 8 Ward Special Capital Reinvestment Reserves, in the amount of \$100,000, to be used in the respective Ward to fund in year infrastructure priorities. This project will provide some financial capacity to affected Ward Councillors in funding in year infrastructure and/or one-time funding requirements, with no associated operating impacts, that are not of the financial scale that would otherwise be considered through the capital budgeting process. Examples of such investments may include: historical plaques, small beautification projects and onetime maintenance initiatives, to name a few.

**Description** Report FCS12024 recommended that a capital project be created for, and funded by, each of the 8 Ward Special Capital Reinvestment Reserves, in the amount of \$100,000, to be used in the respective Ward to fund in year infrastructure priorities. This project will provide some financial capacity to affected Ward Councillors in funding in year infrastructure and/or one-time funding requirements, with no associated operating impacts, that are not of the financial scale that would otherwise be considered through the capital budgeting process. Examples of such investments may include: historical plaques, small beautification projects and onetime maintenance initiatives, to name a few.

**Description** Report FCS12024 recommended that a capital project be created for, and funded by, each of the 8 Ward Special Capital Reinvestment Reserves, in the amount of \$100,000, to be used in the respective Ward to fund in year infrastructure priorities. This project will provide some financial capacity to affected Ward Councillors in funding in year infrastructure and/or one-time funding requirements, with no associated operating impacts, that are not of the financial scale that would otherwise be considered through the capital budgeting process. Examples of such investments may include: historical plaques, small beautification projects and onetime maintenance initiatives, to name a few.

**Description** Report FCS12024 recommended that a capital project be created for, and funded by, each of the 8 Ward Special Capital Reinvestment Reserves, in the amount of \$100,000, to be used in the respective Ward to fund in year infrastructure priorities. This project will provide some financial capacity to affected Ward Councillors in funding in year infrastructure and/or one-time funding requirements, with no associated operating impacts, that are not of the financial scale that would otherwise be considered through the capital budgeting process. Examples of such investments may include: historical plaques, small beautification projects and onetime maintenance initiatives, to name a few.

**Description**

City Council declared a climate change emergency in March 2019, at that time, joining 435 municipalities world-wide. Since then, the total number of municipalities has reached more than 800 cities around the world, as well as, the Government of Canada, all acknowledging the scale of the climate crisis and the need for accelerated action.

To support the Corporate Climate Change Task Force and Hamilton’s Climate Change Action Strategy, City Council established a Climate Change Reserve and Policy with initial funding of \$1.5 M in the disposition of the 2020 tax operating budget surplus.

A 0.25% special levy (\$2.5 M) has been included in the Preliminary 2023 Tax Supported Capital Budget for Council’s consideration along with an additional one-time contribution of \$800K, which would be contributed towards the Climate Change Reserve to support the implementation of the City’s Climate Change Action Strategy. Additional information on the City’s Climate Change Action Strategy is available in Report PED22058 / HSC22030, Hamilton’s Climate Change Action Strategy.

**Description** To address interchange constraints and provide design alternatives that will improve the operations and safety for all road users. The study will identify improvements needed to address MTO operational concerns as well as connectivity to Confederation Park.

**Comments** The project will include but not limited to: Identify opportunities and constraints relating to multi-modal movement through the interchange. Transportation analysis and modelling will determine needs for all road users. Design alternatives including opportunities to improve connections to Confederation Park and select a preferred solution to satisfy EA requirements. The project will identify construction costs and cost-sharing for the project.

**Description** To plan, design and implement improvements to address transportation challenges and projected increases in travel demand in the area of Fifty Road and QEW. This will include ramp terminal improvements and active transportation connections.

**Comments** The project will include but not limited to: Identify opportunities and constraints relating to multi-modal movement through the interchange. Transportation analysis and modelling will determine needs for all road users. Application of complete street and vision zero principles to accommodate balanced transportation solutions. Design alternatives and selection of a preferred solution to satisfy EA requirements and identify construction costs and cost-sharing for the project.

Description

Comments

To review and update City-wide Transportation Plan policies and strategic multi-modal transportation network review.  
Undertake a comprehensive review/evaluate the impacts of previous policies and recommend new directives and adjustments to policy as necessary. Review/evaluate the strategic multi-modal transportation system and recommend network changes to support a balanced transportation alternatives. Study will follow EA process for Master Plans and will include extensive public consultation.

**Description** To undertake transportation master plans for secondary planning areas and updates to existing growth area plans (e.g. Twenty Road West, East Stoney Creek, White Church Lands). Work will include the integration of community design and multi-modal transportation connectivity.

**Comments** A comprehensive review and development of transportation policies. Review/evaluate the strategic multi-modal transportation system and recommend network changes to support a balanced transportation alternative. Study will follow EA process for Master Plans and will include extensive public consultation. The project will integrate community design and multi-modal transportation connectivity.

**Description** Ancaster Old Town Hall requires restoration of the exterior wooden elements. This project will be completed in 2 phases. Phase 1 to be completed in 2024, will include the cupola, soffit and fascia and porch pillars, due to animals chewing through the woodwork and the age of the building. Phase 2 completed in 2025 will include painting of the windows and installation of storm windows to prevent vandalism.

**Description** These funds are critical to defending Council's growth strategy relative to intensification and no urban boundary expansion growth management approach. In August 2024, Council approved a recommendation in Report PED24109 authorizing the following:" That Council authorize \$1,500,000 be added to the tax supported Official Plan OLT Appeals Capital Budget (8142455800) as part of the 2025 budget process". Defense of this position is related to all of Council's strategic priorities.

**Comments** These funds are critical to defending Council's growth strategy relative to intensification and no urban boundary expansion growth management approach.

| <b>Description</b> | <p>This proposed new capital account enables the work directed through the approval of the Urban Forest Strategy to proceed. The project account will fund the activities related to the review and update of the municipal tree by-laws and the development of a City-wide tree protection by-law on private property as directed by City Council through the approval of the Urban Forest Strategy (PED 20173(a)) in June 2023. Activities to be undertaken include the review of existing tree by-laws, plans and processes including the City's engineering standards, existing Tree Protection Plan methodology and requirements and General Vegetation Inventory submissions required for development applications. The work will also require a valuation study to establish a valuation methodology for implementation of a future by-law. A temporary (2 year) Senior Project Manager is requested to manage the project and consultants, coordinate the work with other departments and sections and develop and lead public consultation process including stakeholder engagement. Cost estimates include staff costs, costs for consultants, specialized data and consultation and engagement.</p> |
| <b>Comments</b>    | <p>City Council directed staff to develop a City-wide tree protection by-law on private property within the urban area and lands removed from the Greenbelt and to transfer up to \$150,000 from the Woodland Protection Strategy Capital Account (81217755700) to fund necessary consulting, research or related costs towards the development of a proposed by-law. Council also directed the allocation of up to \$100,000 towards the purchase of LIDAR (Laser Imaging Detection and Ranging) or other data to support the analysis of the urban tree canopy and directed staff to make recommendation to revise the Tree Protection Guidelines and policies for private property, requiring compensation for the removal of existing trees to accommodate new development through replanting or payment.</p>                                                                                                                                                                                                                                                                                                                                                                                              |

**Description** Upgrading the City's Zoning and Development Planning websites to have a more interactive and dynamic Zoning By-law and enhanced information sharing on the status of development applications which would allow for better usability and increased transparency for improved customer service. Additionally the website would be enhanced to include educational videos, how to manuals and frequently asked questions. The funds would be used to create videos similar to comparator municipalities. The City's Zoning Map layer would be enhanced to include more search functions allowing the public to set specific parameters to search properties for opportunities within the City. One such function would allow a search of all residential properties to meet the criteria to have additional dwelling units. The City's website would be upgraded to share all public information related to active development applications including mapping, technical background studies and drawings, 3D model data, staff reports, key milestones and would include a live status of the active development applications.

**Description** The ERASE Commercial Districts Remediation Loan (ECDRL) Program (the Program) provides low-interest Loans which are intended to overcome barriers owners may face obtaining traditional financing for costs required to remediate historical environmental contamination on brownfield sites in support of their redevelopment/reuse. A loan under this Program is intended to serve as a 'bridge' until such time as grant payments commence under either the ERASE Redevelopment Grant (ERG) or Revitalizing Hamilton Tax Increment Grant (RHTIG) Programs. The maximum Loan provided under this Program per site shall be 80% of the actual eligible costs to a maximum of \$400,000, subject to the availability of funds. Funds are for foregone interest on loans advanced.

**Description** The Dundurn Castle interior last had major restoration done in the early 1960s for the Centennial celebration. Many of the finishes and systems have been undergoing renewal on a room by room basis. This project funds the multi year restoration of interior finishes including flooring restoration and carpet replacement. Current focus is on replacing the carpets on the second floor and the staircases.

**Description** The Placemaking team with the City of Hamilton has initiated multiple projects in the last two years, many of which are temporary public art, e.g. murals. These temporary art pieces occasionally require servicing during their short life span to deal with graffiti and vandalism and decommissioning at the end of their temporary duration. Many organizations and community groups (e.g the Art Gallery of Hamilton, McMaster University) collaborate with the City by doing murals on City Property. As part of the collaboration agreement, the City requests the donating party to provide upkeep and decommissioning funds for the pieces, this account would be a place for those funds to reside. This capital account would also be used to service existing Placemaking initiatives.

**Description** Purchase of a minimum of 100 e-bikes and equipment to support the e-bikes, including contractual costs to Bike Share to manage and maintain the e-bikes as part of the Bike Share fleet, in order to enable a 3-year Bike Share E-Bike pilot in Hamilton. Pilot is anticipated to facilitate additional modal shifts by increasing the range within which people can easily travel.

**Description** This project involves the enhancement of existing secure bike parking facilities and the expansion of the program to other areas of the city. The Secure bike parking facilities being proposed include enclosed bike parking structures accessed through a locking technology that allows citizens to create accounts online and unlock the facility by phone. The funding for this project will help the City take a new and innovative approach to secure bike parking by leveraging other planned projects and establishing a network of secure facilities at transit hubs and major destinations including: City Hall, Convention Centre, York Boulevard Parkade, McMaster University (Main West Campus), Mohawk College (Fennel Campus), Eastgate Square transit terminal, Limeridge Mall transit terminal and other locations to be determined through further consultation.

**Description** Greening and introduction of permeable, sustainable surfaces at six city parking lots. Proposed improvements include piloting different porous asphalts, supporting greening with tree and native plant installation, and incorporating bike parking and street furniture. The parking lots proposed for improvement are at various locations including: Dundas (45 King St W & 2 Foundry St), Kenilworth Ave N, 115 Campbell Ave, 51 Balmoral Ave N, and 346 Barton St E.

**Description** As per PED23209, this amount is based on approx. 500 Vacant Properties and includes signs and installation

Comments  
Vacant agricultural farm fields in Rural Hamilton generally do not have municipal address numbers assigned. This lack of a municipal address number can create challenges for emergency services in locating the farm parcel in the event of an emergency. Farm 911 is a program is with a goal to ensure that all vacant agricultural farm parcels are assigned an Emergency Access Point number to allow for ease of property identification and speedier emergency response.

Description

To undertake a multi-modal transportation network assessment of the downtown Hamilton.

Comments

This study will evaluate the transportation network to support a multi-modal transportation network focussed on the efficient movement of people using all modes of travel.

The project will identify linkages to support first and last mile transit trips, incorporate complete street and vision zero policies and principles, while recommending urban design alternatives and solutions to improve the quality of streets downtown.

**Description**

Tourism and Culture has been directed by Council, PED12193 (c), to explore ways to adaptively re-use the Auchmar Estate (Claremont Park) for public use with a phased implementation plan over 10 years.

The buildings, outbuildings, landscape features and a majority of the stone walls require restoration. The site services and public access requires full re-design and replacement. In 2011, an order to comply was received from the Ontario Heritage Trust, ordering the City to complete restoration of the stone walls surrounding the estate, which have fallen into disrepair and have collapsed in several areas. The front portion of the walls around the west side of the coachhouse were stabilized in 2014. The remaining walls still require restoration.

Phase 1 will include design development for the project including detailed project planning, budgeting, drawings and specifications to implement the adaptive re-use of the site. Following phases would focus on the stabilization of the remaining walls, renewal of site service and access, followed by the restoration of the coachhouse, dovecote building, chapel and dormitories and the main house.

| <b>Description</b> | The Convention Centre Garage complex is comprised of the parking garage, Central Utility Plant, Commonwealth Square, Hamilton Art Gallery, Ellen Fairclough Building, Convention Centre, Concert Hall, Municipal Parking Offices and an underground road system connecting the garage to the MacNab Street tunnel. The complex was constructed in 1976 and requires full lifecycle restoration for most components including structural rehabilitation, storm & sewer plumbing, fire suppression system, electrical, etc. Initial works include a full facility assessment to identify all needs followed by waterproofing and concrete restoration for Commonwealth Square followed by internal structural repairs to the garage and MacNab Street tunnel system, replacement of doors and stairwell repairs, replacement/repairs to fire suppression, replacement of pumps and other needs to support the various facilities. Related proj 4901945900 |
| <b>Comments</b>    | Revise name from Summer’s Lane Structural Slab and Expansion Joint Repairs as it does not align with the project scope. Increased previously forecasted budget for 2026 to include fire suppression system replacement which was planned for later in the project but can no longer be delayed due to multiple leaks. Projected lifecycle expenses.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |

**Description** The purpose of this study is to conduct a comprehensive review of parking needs in the Ancaster Downtown Core Area. At present public parking supply is limited and mostly free. The study is intended to identify opportunities for additional public parking, shared parking opportunities and opportunities to optimally manage overall parking supply.

**Description** Creation of a centralized lease administration function within the Corporate Real Estate Office to implement the recommendations and management responses to a lease administration audit, as outlined in Council Report AUD24005. To implement the audit recommendations, a new lease administration and portfolio management IT system is required. The project budget includes funds to investigate new systems in 2025, with implementation in 2026-27. The new system would improve the management of leases and licenses (tracking active agreements) and the financial administration of such agreements, thereby improving collections processes.

**Description** This funding will allow for the completion of the Hamilton Natural Areas Inventory (NAI) project which will build on 2013 NAI work to establish a baseline by which to measure changes over time, both positive in response to actions such as natural areas protection and restoration, and negative changes from impacts such as climate change, land use change, and invasive species. This work is in support of the actions identified in the Council approved Biodiversity Action Plan and will inform future policy and project work in support of the climate action strategy and update to the natural heritage mapping and policies in the Urban Hamilton Official Plan and Rural Hamilton Official Plan. It is a cooperative project with the Hamilton Conservation Authority and the Hamilton Naturalist Club and includes a public participation component.

Description

Restoration of the centre parking office including the parking enforcement squad room and cashier/security office due to significant long term water damage.

Comments

Interior demolition can begin before/during Convention Centre Complex Rehabilitation project's restoration of Commonwealth Square slab and waterproofing but remainder of work would need to follow.

**Description** This project is to provide funding for initiatives to animate and beautify underutilized areas, encouraging more people to use and engage with public spaces. The funds will support economic development by attracting visitors and boosting local businesses. Works could include the placement of planters and plantings, tree planting, strategically placed benches, litter containers, lighting, utility wraps, bike racks, public art, urban braille as well as feasibility studies. Miscellaneous Improvements through placemaking and public art.

**Description** The Downtown and Barton/Kenilworth Housing Opportunities Program (the Program) is intended to provide financial assistance in the form of a low-interest Loan to promote the development of multiple dwelling units that will create new housing opportunities and support robust local commercial district populations that add vibrancy and support demand for local commercial businesses/services. Activities supported by this program include: the creation of at least 10 new dwelling units through the development of a multiple dwelling on vacant land, surface parking areas or the redevelopment of existing buildings; a building addition containing at least 10 new dwelling units; and/or the conversion of existing non-residential space into housing consisting of at least 10 new dwelling units. The maximum Loan provided under this Program shall be 25% of the Cost to Construct Budget to a maximum of \$4 million subject to the availability of funds. Funds are for foregone interest on loans advanced.

**Description** To enhance the active transportation and safety elements of the Bay Street bike lanes in order to implement the recommendations of the In Service Road Safety Review conducted for Bay Street in 2025 including poured concrete barriers, quick build barriers, protected intersections and related signage and markings.

**Comments** Implement the recommendations of the In Service Road Safety Review, including poured concrete barrier curbs, protected intersections, enhanced crossings, traffic calming, quick build barriers, changes to driveways, lines and pavement markings and signage. The extents of the project would cover the entirety of Bay Street from Aberdeen to Guise and the treatments would vary depending on the street typology per section.

|-------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Description | To implement a separated bicycle path along Limeridge Rd between Limeridge Mall and Upper Kenilworth Ave, along with a protected intersection at Limeridge Rd & Upper Kenilworth Ave. This project will provide connections to the future transit hub at Limeridge Mall, future AT bridge over the LINC, various Parks and pathways and the Escarpment Rail Trail. This project will also include a road resurfacing between Limeridge Mall and Upper Gage Avenue, as the road condition is in poor condition. |
| Comments    | Complete a road resurfaing of Limeridge Rd between Limeridge Mall and Upper Gage Avenue and implement a one-sided two-way bicycle path between Limeridge Mall and Upper Kenilworth Avenue, along with a protected intersection at Limeridge/Upper Kenilworth. Upgrades/modifications to existing signals and minor additional civil works related to existing intersection bump-outs.                                                                                                                          |

**Description**      The purpose of the loan program is to act as a catalyst for stimulating the rejuvenation of designated heritage properties within the City of Hamilton. This program applies to properties and buildings designated under Part IV or V of the Ontario Heritage Act located within the Hamilton Municipal Boundary. The loan is a 0% interest loan to a maximum of \$50,000. Funds are for foregone interest on loans advanced.

**Description** Major maintenance work is required to repair the Gage Park Fountain. Work will address the water supply pipes to the fountain, repair the fountain watercourse and bowl, the stairs and the dedication band and remove staining and grafitti. This is a multi year, multi phase project. Project is working in conjunction with project ID# 7202058201 Monument Restoration. RELATED: Project ID# 7202058201 Monument Restoration

**Description** Replacement of boilers and furnaces is required at multiple sites managed by Tourism and Culture, where equipment is end of life-cycle. This is a multi-year project. Projects for 2026 include replacing the boilers at the Auchmar Estate, at the old building at Hamilton Children's Museum as well as replacing the furnaces at Griffin House NHS and the Civic Museum Collections building. Focus will be on minimizing environmental impact, increasing efficiency, improving controls and reducing energy consumption

**Description** The Dundurn Historic Kitchen Garden was created in the early 2000s to replicate the original garden that was on the site during the early 19th century. The garden is enclosed by a wooden fence to provide a micro-climate and for security. Aging materials and vandalism have damaged the fence. Spot repairs are no longer sufficient to keep the fence upright and a full re-building is required, replacing the posts and pickets. Archaeology will also need to be done due to the park being a registered archaeological site.

Description

To implement a multi-use path on Ferrier St between Wellington St and Victoria Ave, along with a bicycle path on Wellington St between Ferrie St and Simcoe St. It will also include 2 Intersection Pedestrian Signals (IPS) with bicycle corssing accomodations at Ferrie/Victoria and Wellington/Simcoe. This project will provide connections to the Victoria Ave cycle track, Strachan multi-use path and allow for a safer crossing for school children, allowing them to walk to school and eliminate the need for them to take a school bus.

Comments

Implement a multi-use path on Ferrie St between Wellington/Victoria; implement a bicycle path on Wellington St between Ferrie/Simcoe. Install 2 IPS's at Victoria/Ferrie and Wellington/Simcoe.

## Expenditure By Asset Component

**Description** The Implementation project will include the set up and short-term use of artificial intelligence technology platform to support the City’s development application and planning processes. The technology enables staff and applicants to quickly assess development potential, zoning compliance, and design feasibility. The implementation will involve system configuration, data integration, user training, and process alignment to improve efficiency, accuracy, and transparency in planning and building services. The project aims to achieve a more streamlined application process enhancing decision-making and the customer experience.

**Description** Waterdown Road upgrade is required to accommodate growth in Waterdown. Design and Construction is being completed by the City of Burlington and funded by the City of Hamilton per a Cost Sharing Agreement between the two municipalities. The 2023 Capital Budget request is the last installment of year over year payments to the City Burlington for the road upgrades in accordance with the agreement.

| <p>This capital project fund is to be used for secondary plan development, revision, implementation and other small area development, design studies and planning studies, as well as the development of targeted planning strategies (i.e. Family Friendly Housing Strategy). Studies range from \$75,000 for a design study to \$250,000 for a full secondary plan, therefore to maintain sufficient funds available additional funds are being requested. These studies implement and advance the City 's growth objectives. This account is also used for costs related to the processing of City-initiated applications for Official Plan Amendment and/or Zoning By-law Amendment, for specific sites within the City.</p> <p>Sustainable Communities provides support to Real Estate to re-designate and/or re-zone City properties where it is needed to facilitate City projects, and to promote highest and best use and maximize financial returns on surplus properties subject to disposition. Supporting studies may need to be completed as part of an application. Community engagement is a significant component and cost related to all of the above work. In alignment with the City's Public Engagement Strategy, there is an expectation of robust and innovative engagement processes as part of these projects, beyond legislated minimums. Yearly addition of funds was identified through multi-year budgeting in 2018.</p> |        |                |

**Description** Lifecycle repairs to municipal car parks operated by Hamilton Municipal Parking including resurfacing and reconstruction as well as accessibility and landscaping upgrades.

**Comments** Adjusted future projection based on 2023 Asset Management Plan. Updated project name to remove "Garage" as improvements to the parking garage are budgeted separately.

**Description** The Hamilton Civic Museums require the creation of updated AutoCAD plans and elevations that amalgamate the mechanical, electrical, architectural and fire safety information for all the sites. This documentation will be done for 32 buildings across 15 sites. The drawings will support Emergency and Disaster planning, exhibit planning and capital work for the sites. 5 sites remain to be documented.

**Description** The Built Heritage Inventory is a multi-year, multi-phase project to conduct updated surveys to identify properties of heritage value worthy of listing on the Municipal Heritage Register, and candidates for designation under the Ontario Heritage Act. Previous phases have been completed in Downtown Hamilton (2014), the Durand Neighbourhood (2017), Ancaster (2020), Waterdown Village (2022), Beasley Neighbourhood (2022) and reviewing historic places of worship across the City (ongoing).

**Comments** The next phase of work will begin in Dundas in summer 2022 and in Landsdale Neighbourhood slated to begin in the fall of 2022.

**Description** This project supports digital programming and exhibit fabrication for the Hamilton Civic Museums including the Hamilton Civic Museum website, licensing fees as well as site based museum construction to facilitate exhibits. In 2026, new exhibit work is planned for the Lister Block Tourism Visitor's Centre, Griffin House NHS, for the Mocassin Identifier project and for Hamilton Children's Museum exhibit enhancements.

| <b>Description</b> | <p>The Hamilton Children's Museum has completed an expansion to double the size of the facility and now includes a large new addition with a new exterior play area, improved washroom facilities and programming spaces, and barrier-free access throughout the building. This project will fund fabrication of the site sign, wayfinding signage and exterior site furniture and amenities such as a sprinkler system and increased security features.</p> |

**Description** This project addresses artifact collection management including cleaning, moving, cataloguing and preparation of artifacts for upcoming capital projects at the Hamilton Civic Museums. Funds also support the Sustainable Archaeology project which stores City archaeological resources at a facility at McMaster. In 2026, focus will be on preparing Dundurn Castle for upcoming HVAC replacement work and remediation of mold in the storage areas at the Hamilton Museum of Steam and Technology. This project is working in conjunction with project ID#3502557005, Museum Collections MGMT Application Software, to facilitate recovery of information lost during the cyber incident.

**Description** Continued studies/analysis to comply with the Ministry of Transportation (MTO) requirements for the implementation of a westbound highway on-ramp at Mohawk Road and Highway 403. Upon approval from the MTO and confirmation of funding, undertake the required detailed design for the construction of a ramp from Mohawk Rd to westbound Hwy 403. Following completion, City will undertake the tender and construction of the ramp on behalf of the MTO.

Description

Removal of aging entrance signs and directional signs to lots that no longer exist. 27 locations (20 poles and 11 signs) related to illuminated signs and or lot electrical services that are not light poles. This budget should address medium and high risk poles and the removal of the signs. Low risk poles would be left until they deteriorate or the lot/road is reconstructed.

**Description** As part of the Provincial decision on the City's Municipal Comprehensive Review and implementing Official Plan Amendments, intensification within the Urban Area is needed to accommodate population and employment until 2051 in addition to meeting the Provincial Housing Target Pledge, as well as updates to existing Secondary Plans. Secondary Plans, transportation studies, urban design studies, infrastructure studies, and financial impact studies, among other studies, will be required. Due to the scope of the work and the need to advance the work quickly, a dedicated staff person is also required with planning and project management expertise to manage the various processes.

**Description** Major re-painting is required at multiple Hamilton Civic Museum sites, as many paint systems reach end of life. This is a multi-site, multi-year project focused on major repainting and repairs of exterior woodwork. In 2026 repainting of wooden elements at Auchmar Estate will continue as well as the painting of exterior woodwork at Dundurn National Historic Site. Renewal of paint is preventative maintenance to protect the exterior envelope and prevent more expensive repairs in the future.

| Description | This Program is intended to provide low-interest Loans or Forgivable Loans that will facilitate the undertaking of eligible leasehold improvements to office space by property owners or authorized tenants in order to support the creation of new office space and improve the marketability and attractiveness of existing office space, attract start-up/business incubators and individual start-up businesses. This funding is for interest related to the loans, funds for the forgivable loans and marketing of the program. City Council, at its sole discretion, has the option at the time of initially approving a loan commitment, of providing a grant or forgivable loan rather than a loan when an applicant is an educational establishment establishing its presence in the Downtown Hamilton CIPA or the Applicant is a Start-up. |
| Comments    | Growth of key industries identified in the Economic Development Action Plan to accelerate job creation                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |

| Description | The ERASE Study Grant Program supports the undertaking of environmental studies on known or suspected brownfield sites to confirm and describe potential on-site contamination or develop a plan to remove, treat, or otherwise manage the contamination in support of site redevelopment/reuse.This step is necessary for owner/developer to address the remediation and move to the next step in the redevelopment. This Program offers matching grants to pay for up to one-half of the cost of eligible studies. The maximum grant shall be 50% of the cost of an eligible study to a maximum of \$20,000 (excluding HST) for the first study, a combined maximum of \$35,000 for two studies per property/project. The funding will also be used for audits of remediation documentation related to ERASE grants, strategic studies, and promotion of the program. For sites being investigated for use as a not-for-profit housing development the maximum Grant per site shall be 100% of the study cost (excluding HST) to a maximum of \$40,000 for the first study and a combined maximum of \$70,000 for two studies. The funds in this project are used to support the ERASE Study Grant Program and the marketing of the program. |

**Description** The Commercial District Revitalization Grant Program (the Program) is intended to provide Grants that will support long-lasting and predominantly exterior physical improvements to the appearance, accessibility and environmental sustainability of commercial or mixed-use commercial properties located within strategic commercial districts, including Business Improvement Areas (BIA), whose visibility and long-term success contributes to Hamilton’s image for both residents and visitors. The activities supported by the program include: Exterior building façade improvements; Exterior/interior improvements that achieve Accessibility for Ontarians with Disabilities Act (AODA) standards; Exterior building/property improvements which improve appearance or functionality including those that enhance environmental sustainability of the building/property; and Limited interior mechanical/ventilation improvements for restaurant uses. The funds are to support the grant payments under the program as well as marketing of the program.

**Description** This project is to provide funding for initiatives to strengthen the economic activity and beautify the public road allowance within strategic commercial districts and Business Improvement Areas as defined through the Revitalizing Hamilton's Commercial Districts Community Improvement Project Area By-Law. The funds will support predominately streetscape improvements. Works could include the placement of planters and plantings, tree planting, strategically placed benches, litter containers, lighting, utility wraps, bike racks, public art, urban braille as well as feasibility studies. Artist designed utility box wraps; Office strategy and implementation of recommendations; Commercial Market Assessments; Feasibility, cleanliness, safety and security audits for downtown and funding for implementation of recommendations; Business Improvement Area Branding, promotion, marketing and communications and website development relating to the financial incentives, downtown initiatives. Miscellaneous Improvements in BIAs and Community Downtowns.

**Description** This is a Council Strategic Initiatives Project. Pursuant to Council direction in Report PED 11222 December 12, 2011. "Property Acquisition for Economic Development Purposes:, City Council approved a program to increase the City holdings of employment/industrial lands to accelerate projects that create a diversified, sustainable economic base for the City of Hamilton through strategic acquisition and/or alteration of property. Funds are for interest charges related to a \$30M Line of Credit, interest rate estimated at 3%. Its expected that the full line of credit will be utilized in 2024 and thus \$900,000 will be required in 2024.

|--------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Description</b> | The funding will be used to retain consultants or fund staff to carry out cultural heritage assessments of properties on the municipal register on Council approved work plan for potential designation and to update existing Designation By-laws as a result of Bill 108. Assessments will utilize City's Evaluation Criteria and Ontario Heritage Act criteria to assess properties and make recommendations regarding designation. Based on motion passed by Municipal Heritage Committee on April 21, 2011 and approved by Council in June 2011. Council approved work plan currently includes over 100 properties. Current "backlog" exceeds/contradictory to Council approved time lines for designations. In some cases affects property owner ability to move forward. Work will assist in reducing wait time for designations. |

**Description** The Capital Budget is to cover costs associated with ongoing and future appeals related to the implementation of the Comprehensive Zoning By-law. There are four outstanding appeals for the Commercial and Mixed Use Zones. The Medium and High Density Residential Zones will include more complicated appeals and will come forward in 2025. Appeals will likely extend to 2028. This fund pays for any necessary outside consultants as well as staff (legal and planning). The development of the Comprehensive Zoning By-law, including the resolution of the related appeals supports the Strategic Priorities of Economic Growth and Prosperity and Built Environment and Infrastructure.

| <b>Description</b> | <p>Initiated in 2015, Hamilton Growth Management Review account funds the staff and consulting resources required to complete Hamilton's growth management work (GRIDS 2) and the Municipal Comprehensive Review (MCR) as required by the Growth Plan and Planning Act. The official plan amendment incorporating Council's preferred growth scenario, employment land conversions and provincial policy conformity work was approved by Council in June 2022 and later approved by the Province through Bill 150 in December 2023. However, the Province has approved a new Provincial Planning Statement which requires the City to immediately undertake its previous MCR work in anticipation of privately initiated urban boundary expansion applications and employment land conversions. This includes retaining external consultants to update both the City's housing and employment needs assessment based on the new PPS. Consultant estimate for this work is \$200k</p> <p>In addition, planning for Major Transit Station Areas has been broken out as a separate phase of the MCR and now includes an additional phase to complete a more in-depth review and update of land uses within MTSA's to support more transit oriented development. This second phase is anticipated to begin in 2025 and the consultant cost is estimated to be \$100k a year for at least two years.</p> |
| <b>Comments</b>    | <p>Note that the funding request includes the salaries of two existing FTE's within Sustainable Communities (Senior Planner and Planner II Position)</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |

**Description**

A City wide employment survey is conducted on an annual basis for the purposes of developing a comprehensive employment database. This data is required to be collected annually to fulfill several mandatory requirements - monitoring provincial growth targets and Official Plan targets, benchmarking and performance measurements and reporting for a variety of city matters including Neighbourhood Strategy areas, transportation and infrastructure master plans. In addition, to assist with the City's economic health and support the Strategic Priority of Economic Prosperity & Growth, develop policy for decision making and Economic Development efforts. In addition, this data is used by other Departments such as Public Works for their master planning exercises.

| Description | The program plans, implements, monitors and manages three core initiatives to mitigating the effects of road infrastructure by reducing the amount of cars using the road system. The Employer Program delivers Smart Commute services, the School Program delivers school travel planning tools and services, and the Community Program delivers services and infrastructure.                                                                                                                                                                                                                                                                                                                                                                                                          |
| Comments    | Includes community-based social marketing; infrastructure, maintenance and replacement; public bike share; end-of-trip facilities; multi-modal connections to transit; complete streets; events, marketing, outreach, urban interventions and promotions; active and safe school travel and the school travel planning process; counters, data management and web-based tools; research and policy work; construction and major event traffic mitigation for major events and infrastructure projects; workplace engagement through the Smart Commute program, the provision of Smart Commute events, tools, online resources, carpool and rideshare management, transit integration, cycling and walking promotions; and a partnership with the GTHA cities and regions and Metrolinx. |

## 4662317124 - Active Transportation Paths and Facilities (New Installations)

|                    |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
|--------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Description</b> | To create and improve cycling and pedestrian infrastructure through the implementation of on and off-road paths, lanes, signed routes and cycling and pedestrian infrastructure as well as end of trip facilities. Planned facilities are included in the annual cycling report.                                                                                                                                                                                                                                                                                                                                                                                    |
| <b>Comments</b>    | This project implements active transportation projects identified in the Integrated Active Transportation Plan (formerly the cycling master plan) and the Accelerated AT Plan that complete network plans and fill gaps in the network. This includes the promotion of active transportation through initiatives such as maps, public consultation, events and advertising. Projects will be defined by the Cycling Master Plan. The addition of cycling lanes and bike shoulders support the strategic initiative of making Hamilton a greener and healthier City in which to live. Cycling funding levels were suggested in City-wide Transportation Master Plan. |

|                    |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
|--------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Description</b> | <p>For the City of Hamilton to continue participation in the GGH planning activities and Transportation Tomorrow Survey (TTS) to gather key data on travel behaviour required for transportation planning, trend analysis, modal shifts, transit planning, modeling, forecasting and several other studies. These funds are the City's contribution pro-rated along with other GTHA municipalities.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
| <b>Comments</b>    | <p>TTS data is the main and valuable data for any Transportation Planning activities. The TTS data is gathered, validated and published every five (5) years. The data and analysis reports are used as input to the City's transportation model and transportation MP studies, traffic impact studies, development studies, transit planning etc. This survey provides details on household structures, travel patterns, travel mode etc. across the GTHA and beyond. The information obtained through the TTS are utilized by various Sections/Departments including Traffic, Planning, Public Health as well as Transportation Planning. The amount reflects the current and forecast funding from the City as a result of the MTO's reduced contribution. Now MTO funds 50% of the cost. The City's contribution towards the share of cost are spread over multiple years.</p> |
|                    | <p>These funds also contribute to the transportation modelling research initiated in 2012 to create a GTHA Transportation Modelling Group (TMG) under UofT to support continued research and continuous improvement of transportation model that will allow for the co-ordination and sharing of transportation models at the provincial, regional and local level.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
|                    | <p>The funds will also be used for the City's yearly contribution to UofT for maintaining and managing the transportation data collected and stored at the UofT (DMG group) since 1986. The funding partners have access to the database at no additional cost.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |

**Description** Review and update of policies in the Urban and Rural Official Plans are required to conform to provincial planning directions in updated provincial plans (Niagara Escarpment Plan and Growth Plan for Greater Golden Horseshoe). Background work for RHOP includes significant woodland identification, key hydrologic data and mapping. There are two main projects being led out of this capital budget:

1. Rural and Natural Heritage System Municipal Comprehensive Review - A 10 year review of the Rural Hamilton Official Plan and the City's overall natural heritage system mapping and policies is required. This is a major project and involves extensive engagement and various technical studies related to an evaluation of agricultural lands and Aggregate policy review. The estimated cost of this full review is \$700k over two to three years.
2. Local Objectives Municipal Comprehensive Review - A comprehensive review and update to the City's Official Plans to ensure that City initiated, Council approved Master Plans and Strategies are incorporated into Official Plan policies. There will be public and stakeholder engagement which will require an external facilitator. There is also external consultants required to assist in some of the technical review including city wide commercial/retail assessments and review of heights/built form within the neighborhoods and corridors. An estimated capital cost of \$300k is estimated over two years.

**Comments** Note that the funding request includes the salaries of two existing FTE's within Sustainable Communities (Program Lead and Planner I Position).

**Description** 'The Provincial Planning Statement policies that requires that the City establish minimum densities around Major Transit Station Areas and enables municipalities to adopt Inclusionary Zoning policies and regulations where they have created Protected Major Transit Station Areas. Work on establishing the MTSA's and Inclusionary Zoning regulations is currently underway. As part of this work, Sustainable Communities requires external consultants to assist with the engagement with residents and community interest groups.

**Comments** The City's MTSA work is being funded out of the Hamilton Growth Management Review capital account

**Description** To improve existing walking and cycling infrastructure through the addition of barriers within existing walking and cycling infrastructure, providing connections to/from other/adjacent walking and cycling infrastrctrue and/or end of trip facilities as well as with the addition of signage and pavement markings.

**Comments** Providing additional physical separation between vehicles, bikes and people, user comfort, experience and safety should all be increased, encouraging additional users. Cycling infrastructure supports the strategic initiative of making Hamilton a greener and healthier City in which to live. Active transportation funding levels were suggested in City-wide Transportation Master Plan.

|--------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Description</b> | The Micromobility program includes bikeshare, electric vehicle (EV) charging stations, e-scooters and bike share and adaptive bike share (e.g. trikes). The program supports the Corporate Climate Change Action Plan.                                                                                                                                                                                           |
| <b>Comments</b>    | Delivery of a program that includes EV station implementation, micromobility hub expansion, relocation and monitoring, e-scooter outreach, e-scooter parking, bike share and adaptive bike share program support, community outreach, contract administration and other related tasks. The program supports the Corporate Climate Change Action Plan through the delivery and management of mitigation measures. |

Description

Complete Environmental Assessment (EA) Phases 1 and 2 to confirm needs and justification and identify alignment of transportation corridor and associated impacts to connect the Red Hill Business Park with the Airport Employment Growth District. Complete Phase 3 and 4 of the EA process.

Comments

Confirm the needs and justification identified in the Citywide TMP and opportunities identified in the Truck Route Master Plan. Identify and evaluate potential alignments to determine impacts and mitigation measures. Tasks include transportation modelling, natural heritage inventories, noise assessments, indigenous and community engagement etc.

**Description**

This is a multi year, multi-phased project to rehabilitate the Veever's House site.

Phase 1 included repairs to the the HVAC system in the building and was completed in 2022.

Phase 2 began in 2023 to add barrier-free accessibility to the site which is currently used by Green Venture for community programming. This project includes adding accessible pathways, a ramp, automatic doors and a barrier-free washroom, and is supported in part by the Enabling Accessibility Fund Grant.

Phase 3 in 2024 will repair the windows.

Future phases will address the building envelope, improve energy efficiency and repair site out-buildings.

**Description** The Civic Museum artifact storage facility requires replacement of the cladding to upgrade the energy efficiency and weather resistance of the building. Phase 1 which was completed in 2025, included removal of failing cladding and repairs to the masonry substrate and to address entrance stairs. Phase 2 to occur in 2026 will replace the vapour barriers and flashings, and add new insulation and cladding, with the goal of improving building performance. appearance and safety. This project will also facilitate feasibility planning to address space restrictions in the current facility and provide data regarding adding an office space with an accessible entrance, accessible bathroom and kitchenette. An new energy efficient HVAC system will be added.

**Description** Heritage Resource Management has been directed by Council, PED12193 (c), to explore ways to adaptively re-use the Auchmar Estate (Claremont Park) for public use with a phased implementation plan over 10 years.

All of the buildings, outbuildings, landscape features and a majority of the stone walls require restoration. The site services and public access requires full re-design and replacement. In 2011, an order to comply was received from the Ontario Heritage Trust, ordering the City to complete restoration of the stone walls surrounding the estate, which had fallen into disrepair and had collapsed in several areas. The front portion of the walls around the west side of the Coach House was stabilized in 2014. The remaining walls that surround the site still need to be restored.

Phase 1 will be to pursue design development for the project including detailed project planning, budgeting and then drawings and specifications to implement the adaptive re-use of the site. The stabilization of the remaining walls and renewal of site service and access will be prioritized followed by the restoration of the Coach House, dovecote building, chapel and dormitories and the main house.

**Description** Designated Substance Reports need to be updated for all of the Heritage Facilities and Civic Museums managed by Tourism and Culture. Reports were last done over 10 years ago and the information is no longer relevant for many buildings. DSS reports are required to undertake any construction work where the building will be disturbed and are necessary for the health and safety of staff.

**Description** Dundurn Castle at Dundurn NHS requires new HVAC equipment. The current system is at the end of its life, frequently breaking down and not heating and cooling the building effectively. The project will replace the system components, repair ductwork where necessary, upgrade the heating and cooling equipment and building automation systems as well as repair the towers that contain the equipment, with the goal of improved energy efficiency and creating a more sustainable system.

**Description** The Gardener's Cottage is part of Dundurn National Historic Site and requires repairs to the building. This project is a multi-year stabilization project. Roof, gutter replacement and roof parapet stabilization was completed in 2024. Masonry restoration is to be completed in 2025-26 followed by window and door repair and restoration. Adding site lighting and addressing security issues will also be part of this project.

| <b>Description</b> | <p>The continued development of a 3D model city-wide to support development applications. The model is updated with 3D model submissions through development applications. The 3D modeling capabilities along with 3D printing are used to support development application analysis, to enhance community engagement and visualization for planning projects as well as provide analysis for corporate real estate valuations, city initiatives such as the Urban Forest Strategy, and downtown servicing projects. The city-wide model is being configured to be accessible internally by all staff as an initial step to making the model publicly accessible. The development industry uses city-wide publicly accessible models to prepare and support development applications across the GTA. Hamilton has been behind other mid-sized and large municipalities in developing 3D capabilities and having a publicly accessible city-wide 3D model.</p> |

**Description** Based on the OSIM bridge inspection, it has been determined that the existing bridge has become deficient and is in need of rehabilitation to extend the asset's life and performance. This is intended to reduce the risk to public safety while maintaining continuity of the road network.

**Description** The principal objectives of this project are two-fold. First, to rehabilitate the existing culvert, thereby addressing any structural issues, concrete deterioration, severe spalls and delamination. Second, the project aims to include the reconstruction of the wearing surface on top of the culvert and approach wearing surfaces, as well as the implementation of a code-compliant guiderail system. **Description** To address projected intersection operational issues and provide design alternatives that will improve the operations and safety for all road users. The study will identify improvements needed to address MTO operational concerns. CPMS 20013

**Comments** The project will include but not limited to: Identify opportunities and constraints relating to multi-modal movement through the Longwood Aberdeen area. Transportation analysis and modelling will determine needs for all road users. Design alternatives and selecton of a preferred solution to satisfy EA requirements and identify construction costs and cost-sharing for the project.

Description

The main objective of the project is to replace the deteriorating retaining wall (RW0057) on Old Dundas Road (according to the 2021 OSIM Inspection), including the damaged concrete railing, while also conducting necessary repairs and minor rehabilitation on the adjacent concrete culvert. This comprehensive approach aims to ensure the structural stability, safety, and longevity of the retaining wall system, as well as mitigate risks to public health and safety. CPMS 11802

**Description** This account is to fund new rehabilitation/reconstruction technologies on a pilot project basis. Emphasis toward technologies not yet used by the City should be given priority. The objective of these pilot projects is evaluate the new technology for possible future permanent application with the goal of improved performance and/or cost savings.

**Description** The main objective of the project is to rehabilitate retaining wall RW0116 on Sherman Access West (according to the 2021 OSIM Inspection), by performing a Life Cycle Assessment to determine the rehabilitation options. This comprehensive approach aims to ensure the structural stability, safety, and longevity of the retaining wall system, as well as mitigate risks to public health and safety. CPMS 11804

| <b>Description</b>                        | Project established to ensure that funding of capital is available as replacement of hoist scissor assemblies is required at the end of their useful lives.                                                                                                                                    |                                          |                         |                        |                  |
| <b>Comments</b>                           | 2200 Upper James (MTC) currently has 23 hoists comprised of 2 scissor assembly (40ft hoists) and 3 scissor assembly (60ft hoist) configurations totaling 52 scissors. Each of these scissor assemblies are valued at approx. \$50,000.00 and have a lifecycle of 5-8 years depending on usage. |                                          |                         |                        |                  |

**Description** Complete equipment replacements in order to move towards net zero emissions at Traffic Operations as per the Pathway to Net Zero reports

- Convert exterior lighting to LED
- Install VRF System with ERV's
- Replace gas fired tube and unit heaters with electric units in bays
- Install air curtains on bay doors
- Replace gas burners with electric burners in ERV's
- Replace gas water heater tank with electric

**Description** Low Carbon Fuel Assessment Opportunity for Diesel Generators Upgrades/ Repairs for TSSA Compliance- Implementation (Feasibility study ongoing in 2023)  
This project supports the following Council Priority:  
Sustainable Economic & Ecological Development as it relates to the acceleration of City’s response to climate change. This project will produce a reduction in the City’s GHG emissions.

### 3542441101 - 2024 Lifecycle Renewal Backlog CFEM

| Description |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
|-------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|             | <p>The unfunded amount identified in this capital detail sheet is the total deferred capital lifecycle renewal backlog to 2024 within the Corporate Facilities &amp; Energy Management (CFEM portfolio). During past capital budget process starting in 2017, staff identified that there is a significant capital funding gap in Facilities across all portfolios: Recreation Facilities, Corporate Facilities and Entertainment Facilities. This funding gap is an obstacle to the achievement of the 10 year Facility priorities identified through Report ECS07068(d) (City Wide) respecting Recreation Facilities, as well as keeping up with the increasing backlog of facility infrastructure renewal across all portfolios. This funding gap in lifecycle renewal is contrary to recommendations by the Canadian Infrastructure Report Card (CIRC), where recommend an infrastructure renewal rate between 1.7% and 2.5% of the replacement value of buildings. The CIRC is supported by four organizations as follows: Canadian Construction Association, Canadian Public Works Association, Canadian Society for Civil Engineering, Federation of Canadian Municipalities.</p> |

## 3542455101 - MTC & City Wide Facilities Flood Mitigation & Adaptation Framework

|                    |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
|--------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Description</b> | <p>1 A– Develop a risk assessment framework including a scoring system/checklist that will be used internally to assess an individual facility's risk as it related to flood resilience/ stormwater mgt. The framework will be used to identify which locations are at highest risk and may require immediate/short-term preventative measures to be taken to avoid similar flooding incidents, as well as mid-longer term planning considerations. Expected deliverable from consultant is the tool for assessment of flood resilience/ stormwater management</p> <p>1B – Provide and detail options for mitigation and preventative measures for dealing with surface/storm/flood water (both emergency and ongoing). Expected Deliverable a list of short/ medium term and long term solutions application to different type of facilities with examples in Canada</p> |
| <b>Comments</b>    | <p>The project will be split throughout the next three years.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |

**Description** Development of a Natural lands acquisition strategy - per Council Priorities direction "Sustainable Development, Outcome 4". Measure of success - Increased Inventory of municipally owned natural areas and preservation of farmland, greenspace, woodlots and watersheds". Project will build on the Parks Master Plan, and include a review of existing natural open spaces, and strategies to increase the quality and quantity of natural lands in municipal ownership. Work requires approval of Business case for FTE's to complete the study and implement the recommendations.

**Description** Changing weather patterns have instigated areas in parks and cemeteries that are incurring damage due to flooding, erosion and/or slope failure. Funding is required to initiate work to mitigate and resolve the impacts of the rainfall events and flooding. Works to include regrading or adding catch basins to areas to improved drainage in Parks.
