### NON-EMERGENCY PHONE NUMBERS

**HAMILTON POLICE SERVICE NON-EMERGENCY NUMBER:** 905-546-4925  
**HAMILTON FIRE DEPARTMENT NON-EMERGENCY NUMBER:** 905-546-3333
**OUT-OF-AREA CONTACT**
Choose an emergency contact for family members to call if you are separated and can’t reach each other.
Select a relative or family friend who lives out of the area, so they won’t be affected if an emergency happens here. Make sure each family member knows their contact information.

<table>

CALLING 9-1-1

Make the right call and use 9-1-1 correctly. Non-emergency calls to 9-1-1 cause delays in sending first responders to people who urgently need their help.

CALL 9-1-1 IF YOU NEED POLICE, FIRE OR PARAMEDICS TO RESPOND IMMEDIATELY TO A:

- Fire
- Medical emergency
- Crime in progress

A medical emergency involves a serious or life-threatening injury.

DO NOT CALL 9-1-1 FOR:

- Weather information
- Road conditions or school closures
- Power outages

If there is no immediate danger you can call emergency services using a non-emergency contact number listed on page 50 of this guide.
IMPORTANT REMINDERS FOR CALLING 9-1-1
Provide the address or location you are calling from.

MAKE SURE YOUR HOUSE OR UNIT NUMBER OR 9-1-1 ROAD SIGN IS CLEARLY VISIBLE
First responders need be able to see these to locate you. Don’t let them become hidden behind bushes or shrubs.

CALLING 9-1-1 FROM A CELL PHONE
Know your location. Look for a street address on a nearby building or provide the nearest intersection or highway exit number. Be prepared to describe your location.

FOLLOW THE INSTRUCTIONS OF THE 9-1-1 DISPATCHER AND DO NOT HANG UP
9-1-1 dispatchers are highly trained. Follow their instructions and stay on the line.

ANALOG PHONES MAY STILL WORK IN A POWER OUTAGE
If you have an old analog telephone (e.g. one that is not cordless and doesn’t need to be plugged into a power outlet to work) and a landline phone service, your phone will still work during power outages if the phone lines are not damaged.

Analog phone
Emergencies can endanger your health and safety as well as damage your home and property. The transportation systems, telecommunications, electricity and other infrastructure we rely on every day may be disrupted. They can also pose a risk to the environment and economy of our community.

**IN AN EMERGENCY:**
- You might need to take shelter in your home for hours or even days.
- Your home’s electricity, heating or water supply may not work.
- You could have difficulty contacting family and friends.
- If you are away from home, you might not be able to return immediately.
- You may even have to evacuate and leave your home on short notice.
In an emergency, first responders must focus their initial efforts on helping people who need immediate assistance. Emergency services may not be able to reach you immediately or they may need to assist others first. You can take action ahead of time to help protect you and your family. Use this guide to get prepared in case disaster strikes.

TAKE THE STEPS TO BE PREPARED:
- Know the risks … that can occur in your area.
- Make a plan … so that you and family members will know what to do.
- Prepare a kit … with supplies to be prepared for the emergency.
- Know what to do … in specific emergencies.

IT’S UP TO YOU FOR 72!
Be prepared to take care of yourself and your family’s needs for up to 72 hours in an emergency.
STEP 1: KNOW THE RISKS

In the City of Hamilton, we prepare for the possibility of a large-scale emergency.
HAMiLTON’S RISKS
A Hazard Identification and Risk Assessment conducted by the City of Hamilton
has identified the following potential hazards in our city:

HAZARDOUS MATERIALS INCIDENT/SPILLS
Transportation accidents, industrial accidents, etc., where a chemical is
spilled/released.

FLOODING
Overflow or inundation of water from a river or other body of water,
overland flooding.

HUMAN HEALTH EMERGENCY
Disease outbreak due to water or food contamination, human or animal-borne
diseases, epidemics, influenza.

ENERGY EMERGENCY (SUPPLY)
Severe disruption of the supply, production and transportation of electricity, natural
gas, and/or oil, power outage, gas shortage.

EXTREME ICE STORM
Large scale and long durations of freezing rain, accumulation of ice impacts upon
transportation, buildings, power lines and communications infrastructure.

EXPLOSION AND FIRE
Large scale structure fires or explosions at homes, multi-residential units,
apartment buildings or other structures.

TRANSPORTATION EMERGENCY – RAIL
A crash collision or incident of large scale involving any rail mode of transportation.

CRITICAL INFRASTRUCTURE FAILURE – TELECOMMUNICATIONS
Failures of landlines, cell phones, networks, as well as communications systems
relied on by emergency responders.
WEATHER ALERTS

WHAT’S IN AN ALERT?
Do you know the difference between a special weather statement, advisory, watch and warning?

WEATHER ALERTS FROM ENVIRONMENT AND CLIMATE CHANGE CANADA
Environment Canada issues alerts when potentially dangerous weather conditions are in the forecast. Different alerts are used depending on the expected severity and timing of the event:

- **SPECIAL WEATHER STATEMENTS** are the least urgent type of alert and are issued to let people know about unusual conditions that could cause concern.

- **ADVISORIES** are issued for specific weather events (like blowing snow, fog, freezing drizzle and frost) that are less severe, but could still significantly impact Canadians.

- **WATCHES** alert you about weather conditions that are favorable for a storm or severe weather, which could cause safety concerns.

- **WARNINGS** as certainty increases about the path and strength of a storm system, a WATCH may be upgraded to a WARNING, which is an urgent message that severe weather is either occurring or will occur. Warnings are usually issued 6 to 24 hours in advance, although some severe weather (such as thunderstorms and tornadoes) can occur rapidly, with less than 30 minutes notice.

For more information on the public weather alerting program, visit: ec.gc.ca

FLOOD MESSAGES

CONSERVATION AUTHORITIES AND THE MINISTRY OF NATURAL RESOURCES AND FORESTRY issue messages and alerts when flooding is possible or about to occur. There are four types of messages that they use:

WATER SAFETY STATEMENT High flows, unsafe banks, melting ice or other factors could be dangerous for recreational users such as anglers, canoeists, hikers, children, pets, etc. Flooding is not expected.

FLOOD OUTLOOK STATEMENT Early notice of the potential for flooding based on weather forecasts calling for heavy rain, snow melt, high wind or other conditions that could lead to high runoff, cause ice jams, lakeshore flooding or erosion.

FLOOD WATCH Flooding is possible in specific watercourses or municipalities. Municipalities, emergency services and individual landowners in flood-prone areas should prepare.

FLOOD WARNING Flooding is imminent or already occurring in specific watercourses or municipalities. Municipalities and individuals should take action to deal with flood conditions. This may include road closures and evacuations.

Source: https://conservationontario.ca/conservation-authorities/flood-erosion-management/flood-messages/
STEP 2: MAKE A PLAN

Make emergency plans to know what to do before, during, and after an emergency. Hold a meeting so that every member of the home is familiar with your plans.

- HOME ESCAPE PLAN
  Create a home escape plan that includes two ways out of every room in your home. Identify a safe location outside of your home where you will meet (e.g. the end of the driveway or a neighbour's porch).

- EMERGENCY CONTACTS AND COMMUNICATION PLAN
  Compile a list of emergency contact information for all family members and an out-of-area emergency contact.

- IDENTIFY A MEETING PLACE TO REUNITE
  Choose a location where family members will go to reunite if they can’t go home in an emergency. It could be the home of a relative or close family friend, or a public building such as a nearby community centre.

- COPY AND PROTECT IMPORTANT DOCUMENTS
  Make photocopies or scan electronic copies of identification cards, banking, financial accounts, insurance and medical information. Store this information in your emergency kit in a safe, secure place.

- TAKE A HOUSEHOLD INVENTORY AND CHECK INSURANCE INFORMATION
  Create an inventory of household possessions and property. Check your insurance policy to ensure that you have adequate coverage for your home and property.
Make a plan to be able to leave your home quickly and safely in the event of a fire or sudden emergency. Please use page 16 to:

- Draw a floor plan/map of your home showing all doors and windows.
- Use arrows to mark two safe ways out of each room.
- Pick a safe place to meet outside of your home.
- Practice your home escape plan together.
EMERGENCY CONTACTS AND COMMUNICATION PLAN

Family members may be in different locations (work, school, etc.) when an emergency occurs. Ensure everyone carries the emergency contact information for family members and an out-of-area contact.

The information can be carried in a cell phone, purse, wallet card, child's backpack or school agenda. Extra copies can be kept at home, work, in your vehicle and in your emergency kit.

IDENTIFY A MEETING PLACE TO REUNITE

Choose a location where family members will go to reunite if they can't go home in an emergency.

It could be the home of a relative or close family friend, or a public space such as a nearby community centre.

We will reunite at:

<table>
<thead>
<tr>
<th>Address:</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>Telephone (if applicable):</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
</tr>
</tbody>
</table>

Make plans ahead of time about who will pick up children from school or daycare. Do you know the emergency plans at your child's school?
COPY AND PROTECT IMPORTANT DOCUMENTS

Make backup copies of important identification, financial and insurance documents, such as:

- Driver’s License
- Social Insurance Number and Health Card Number
- Passport
- Bank and Investment Account(s)
- Vehicle Identification Number
- Insurance Company and Policy #
- Birth and Marriage Certificates
- Wills, Property Deeds
- Recent photos of each family member in case you are separated

Photocopy the documents or scan them and store them electronically on a USB flash drive. Keep one copy in your Emergency Preparedness Kit, and another copy in a secure location away from your home.
HOUSEHOLD INVENTORY AND INSURANCE INFORMATION

Compile an inventory of household possessions. For each item include a description, its value or replacement cost, and serial/model number. Photographs are useful for keeping a record of possessions, especially unique items such as antiques and jewelry. When your inventory is complete, check that your insurance policy provides adequate coverage for your property and possessions.

<table>
<thead>
<tr>
<th>Insurance Company</th>
<th>Policy Number</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td></td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>Insurance Agent</th>

<table>
<thead>
<tr>
<th>ITEM DESCRIPTION</th>
<th>ESTIMATED COST</th>
<th>SERIAL/MODEL NUMBER</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

Copies of this table can be made for each room in your home.
Assemble an emergency kit with the supplies needed to be self-sufficient for up to 72 hours. When assembling your kit, consider that you may not have power or water for a period of time depending on the nature of the emergency.

### ASSEMBLE AN EMERGENCY KIT

#### 72 HOUR KIT CHECKLIST

- Water (for drinking and hygiene)
- Non-perishable food
- Manual can-opener
- Battery-powered or hand-crank radio
- Spare batteries
- Clothes (seasonally appropriate)
- Prescription medications
- Money (in small bills and change)
- Hand sanitizer
- Playing cards or games
- Back up batteries or power bank for cellphones
RECOMMENDED ADDITIONAL ITEMS

- Multi-tool or knife
- Duct tape
- Work gloves
- Dust masks
- Disposable dishes, cups, and cutlery
- Games or small toys for children

FOOD IN EMERGENCIES

Choose non-perishable foods that:

- Have a long shelf life
- Are ready to eat or require little preparation
- Are nutrient or calorie rich

DO THE BATTERIES WORK?

Put a crank-powered radio and flashlight in your kit so that you won’t have to worry about expired batteries.

PRESCRIPTION MEDICATIONS

If possible, keep a one-week supply in your kit (and a copy of the prescriptions).

EMERGENCY CASH

ATMs, debit and credit card machines may not work in a power outage so keep some spare cash in your kit; use small bills because stores may not be able to make change.

NEVER use camping stoves, barbecues, propane heaters or generators indoors. The carbon monoxide gas they produce can be deadly.

Check your kit at least twice a year. Ensure all items are in working order and replace any food, water, batteries, and medications that will expire.
INCLUDE ITEMS FOR INDIVIDUALS WITH SPECIFIC NEEDS

Every kit will be different and based on each family’s individual needs. Include supplies for infants, seniors, and individuals with disabilities or special needs if required. This might include:

**INFANTS**
- Baby food
- Diapers
- Baby wipes
- Pacifier
- Extra clothing
- Small blanket

**SENIORS OR INDIVIDUALS WITH DISABILITIES OR SPECIAL NEEDS**
Include items based on personal requirements. This might include:
- Spare eyeglasses
- Extra hearing aid batteries
- Denture or oral care supplies
- Adult hygiene products
- Spare syringes or catheters as needed
- Special equipment and instructions
- Extra batteries for medical equipment
- A whistle, alarm or signaling device
- Supplies for service animals
- Backup battery power
- A summary of medical needs, prescriptions, medication schedules and instructions
If you use a mobility device, include a tire patch kit, can of seal-in-air product, supply of inner tubes, pair of heavy gloves and a spare deep-cycle battery for your motorized wheelchair or scooter.

If you have a visual impairment, include an extra cane, talking or Braille clock and any reading devices/assistive technology to access information.

If you have a hearing impairment, include extra writing pads and pencils for communication, pre-printed key phrases you would use during an emergency, and extra batteries for assistive devices.

Other special items to include in my Emergency Preparedness Kit:

CREATE A PERSONAL SUPPORT NETWORK

Identify two or three reliable people who could assist you in an emergency. They could be family members, friends or neighbours. Keep their contact information up to date on Page 2 of this guide. Provide them with a key or way to access your home so they can check on you in an emergency. Ensure they are familiar with your emergency kits and plans, your specific needs and how they can assist you.

The Province of Ontario and Public Safety Canada have detailed guides on emergency preparedness for individuals with disabilities and special needs posted on their websites:

emergencymanagementontario.ca
getprepared.gc.ca

Once you are sure your family is safe after an emergency, check on neighbours to see if others need assistance.
PET EMERGENCY KIT

Pets need emergency plans too. In an evacuation, service animals are allowed in evacuation centres, but family pets cannot always be accommodated. Make plans for your pet to stay with family, friends or at a kennel. Keep the contact information for local kennels or pet-friendly hotels/motels in your emergency plan. Partner with a neighbour to check on pets if one of you is not home in an emergency. Build a pet emergency kit.

Consider the following items:

- Food, water, bowl and can opener, leash, collar and/or muzzle
- Pet ID tag with your contact number
- Pet carrier for transportation
- Cat litter and plastic bags
- Pet waste bags
- Blanket and a small toy
- Medications that your pet is taking
- Photograph of your pet(s)
- Proof of recent vaccinations
VEHICLE EMERGENCY KIT

- Snow brush, ice scraper and shovel
- Booster cables
- Flashlight
- First aid kit
- Water and emergency food supply
- Blanket
- Spare warm clothing
- Hat, mitts, scarf and boots
- Windshield wiper fluid and gas-line antifreeze
- Sand, salt, cat litter or traction mats for ice
- Emergency flares
- Emergency contact numbers (including roadside assistance)
- Fire extinguisher
- Whistle
- Spare fuel container (kept out of passenger area of the vehicle)
- Road maps
- Car charger or power bank for cellphone

Keep a seat belt cutter and window breaker tool within reach of the driver’s seat. Keep your gas tank at least half full. Gas station pumps may not work in a power outage. If you are stranded in your vehicle in a winter storm, stay warm by running your car for 10 minutes each hour.
When emergencies happen, it is important that you remain calm and remember to:

- Check for hazards in your immediate area (e.g. fallen power lines, broken glass, damage to buildings).
- Check yourself and others for injuries and provide first aid or get help if necessary.
- Check on neighbours, especially seniors, people with disabilities and children.
- Stay informed – monitor radio, TV and/or social media for updates and instructions.
- Get your emergency kits and follow your emergency plans.

SEVERE WEATHER

TORNADOES

On average, 12 tornadoes are confirmed in Ontario each year. However, that number may be higher as investigations are done only when damage is reported. The powerful rotating winds and blowing debris can cause fatalities, injuries and extensive damage. They strike with little warning, but they usually develop out of severe thunderstorms.
IF A TORNADO WARNING IS ISSUED OR YOU SPOT A TORNADO:
- Get inside a sturdy building.
- Go to the basement (or ground floor if there is no basement).
- Take shelter in a small interior room with strong walls and no windows.
- Get under a sturdy desk or table.

IF YOU ARE CAUGHT OUTDOORS AND CANNOT GET TO A BUILDING:
- Do not take shelter near trees or power lines.
- Lie flat and face-down in a ditch, ravine or low-lying depression.
- Cover the back of your head and neck for protection.
- Beware of flooding from downpours and be prepared to move.

IF YOU ARE DRIVING:
- Get out of your vehicle and take shelter inside a sturdy building.

IF A STURDY BUILDING IS NOT AVAILABLE:
- Safely get noticeably lower than the level of the roadway. Leave your car, and lie flat in a ditch and shield your head with your arms, OR
- Park the car as quickly and safely as possible, out of the traffic lanes. Stay in the car with the seat belt on and put your head down below the windows. Cover your head with your hands and a blanket, coat or other cushion if possible.
- Do not park under a bridge or overpass.
- Do not chase tornadoes as they are unpredictable and can rapidly change speed and direction.

Mobile homes, sheds and barns are not safe places to take shelter. When inside buildings, avoid gymnasiums, auditoriums or other large open rooms with wide ceilings. In a tornado, getting to safety is your first priority. Taking time to take photos or video of a tornado can put you in danger.
FLOODS

Floods are the most common and costly natural disaster in Canada. In Hamilton, localized flooding can occur because of heavy rain events or during the spring thaw when there is rapid melting of the winter snow pack.

PREPARATIONS TO REDUCE DAMAGE FROM BASEMENT FLOODING:

- Install a sump pump and test it annually.
- Install zero reverse flow (back-flow) valves in basement drains.
- Extend eavestrough downspouts to carry water away from your home.
- Grade your property to carry rainwater away.
- Keep downspouts, drainage grates and catch basins clear of debris.

IF FLOODING IS IMMINENT:

- Move basement furniture, electronics and valuables upstairs.
- Move hazardous chemicals, paints, etc. upstairs out of basement storage.
- If there is time, you may be able to protect your home with sandbags or plastic barriers.
- Check with local officials for instructions.

Do not enter a flooded basement. Water combined with electrical wires creates a dangerous electrocution hazard. Leave your home and contact your electricity distributor and local emergency authorities. Do not return home until it is safe to do so.

IF YOU NEED TO EVACUATE DUE TO FLOODING:

- Take your emergency kit with you and lock your doors.
- Follow routes and instructions given by emergency officials.
- Do not wade through flooded areas as fast-moving shallow water can be powerful enough to sweep you away.
- Do not drive through a flooded roadway as water can be deeper than it appears and washed-out, sink holes or damaged areas may not be visible.
AFTER A FLOOD:
- Only return home after authorities have indicated that it is safe.
- If your basement was flooded do not enter your home if there is a risk of electrical shock; an electrician will need to determine if it is safe to turn the power back on.
- Check for structural damage to walls and supports.
- Watch for sewage contamination, broken glass and other dangerous flood debris.

CONTAMINATED WATER AND MOLD:
- Flood water can be contaminated with untreated sewage and other pollutants; protect your health when cleaning up after a flood by wearing gloves, rubber boots and a mask.
- Mold can grow rapidly in damp basements which can lead to serious health problems; if mold is present, find out how to safely remove it and wear gloves and a mask for protection, or have it removed by professionals.
STEP 4 – KNOW WHAT TO DO IN AN EMERGENCY
THUNDERSTORMS

Thunderstorms can produce lightning strikes and can cause injury and possibly death. Severe thunderstorms can produce damaging winds, large hail, and heavy localized rainfall.

PREPARING FOR THUNDERSTORMS AND HIGH WINDS:
- Cut down dead trees and branches ahead of time so they won’t fall and cause damage.
- Put away or secure lawn furniture, umbrellas, etc.
- If a thunderstorm approaches unplug computers, televisions and electronic equipment, which could be damaged by surges, or use surge protectors to protect your electrical devices.
- If you are out on the water, get to land and take shelter.

WHEN THE STORM HITS:
- Take shelter inside a building.
- Stay away from doors, windows, fireplaces, tubs, showers or items that conduct electricity.
- Stay inside until 30 minutes after the last rumble of thunder.

IF YOU ARE CAUGHT OUTSIDE IN A THUNDERSTORM:
- Get inside a safe building or vehicle as quickly as possible.
- Don’t take shelter under a tree or tall structure, which could be hit by lightning.
- Avoid being the highest point in an open area.

When thunder roars, go indoors! When you can hear thunder, you can get hit by lightning. Take shelter immediately and remain inside for 30 minutes after the last flash of lightning or sound of thunder.
EXTREME TEMPERATURES

Extremely hot or cold temperatures puts extra stress on the body. Environment Canada issues extreme heat or cold warnings when there are temperatures that can put health at risk.

EVERYONE IS AFFECTED BY EXTREME TEMPERATURES, BUT SOME INDIVIDUALS ARE MORE AT RISK:
- Infants and young children
- Seniors
- Individuals experiencing homelessness
- Pregnant women
- People with chronic medical conditions
- People who work outside or engage in outdoor recreational activities

STAY SAFE IN EXTREME HEAT:
- Drink plenty of water and fluids to prevent dehydration.
- Avoid strenuous outdoor activity and exercise.
- Take a cool shower or bath to cool off.
- If you go out, wear a hat and light loose-fitting clothing.
- Keep your home cool – close curtains to block direct sunlight and use fans or an air conditioner.
- Do not leave children or pets unattended in a vehicle.
- If you do not have air-conditioning, visit local public buildings or shopping malls to cool off.
- Learn to recognize the signs of heat exhaustion and heat stroke.

The City of Hamilton’s Heat Warning and Information System (HWIS) includes seasonal monitoring and two levels of heat response: Heat Warning and Extended Heat Warning. From May to September, the City monitors weather forecasts, including the humidex, for conditions that can increase health risks. During a Heat Event, various City of Hamilton and community sites are open for residents to go to cool off.
STAY SAFE IN EXTREME COLD:

- Stay inside and avoid going outdoors if possible during extreme cold.
- If you must go out wear warm clothing including boots, mitts and warm headwear.
- Learn to recognize the signs and symptoms of frostbite and hypothermia.
- If outdoors, go inside frequently to warm up.
- Keep pets indoors during extreme cold.
WINTER STORMS, BLIZZARDS AND ICE STORMS

Winter storms, blizzards and ice storms can produce heavy snowfall, hazardous driving conditions and power outages. Be prepared ahead of time to reduce your risk of harm.

PREPARING FOR WINTER STORMS:
- Listen to weather reports to be aware of approaching storms.
- Prepare your vehicle for winter driving conditions with winter tires, windshield wipers and perform regular maintenance.
- Keep your gas tank at least half full.
- Carry an emergency kit in your vehicle.

WHEN A STORM HITS:
- Postpone travel unless necessary.
- Drive with caution: slow down, leave extra following distance, turn on your vehicle lights.
- If caught in a blizzard while driving, pull well off to the side of the road and turn on your flashing hazard lights.
- If your car becomes stuck in snow and you can’t get it out, stay in the vehicle to stay warm.
- To stay warm in a vehicle, you can run the engine for ten minutes every hour (check that the vehicle tailpipe is not blocked by snow to prevent carbon monoxide fumes from entering the car).
- If you must go outside, dress for the weather and wear warm boots, mitts and a hat or toque.
- At home keep snow and ice from building up around your gas meter, and gas appliance vents.

ICE STORMS:
- Ice storms and freezing rain create particularly dangerous driving conditions; avoid driving and wait until road conditions improve.
- There is an increased risk of power outages when freezing rain accumulates on power lines and trees.
- If you encounter fallen power lines, stay at least 30 metres (approximately 100 feet) away and contact the electricity distributor or call 9-1-1 if in immediate danger.
MAJOR ACCIDENTS

TRANSPORTATION ACCIDENTS

The City of Hamilton is home to several major transportation routes that carry passengers and freight within and across our municipality. Train derailments, plane crashes, and marine accidents are all risks in Hamilton, however the most common transportation accidents are vehicle collisions on our highways and roads. They can produce injuries and fatalities as well as costly damage and lengthy traffic delays.

BE PREPARED:
- Have your vehicle serviced regularly.
- Keep your gas tank at least half full.
- Carry an emergency kit in your vehicle.
- Check the weather before you head out and adjust driving behaviour to road and traffic conditions.

IF ROADS ARE SLIPPERY, OR SNOW COVERED OR THERE IS REDUCED VISIBILITY DUE TO RAIN, FOG OR BLOWING SNOW:
- Reduce speed.
- Leave extra following distance.
- Turn on vehicle lights to see and be seen.
- Avoid all unnecessary travel.
HAZARDOUS MATERIAL INCIDENTS

Hazardous materials are chemicals or substances that can harm people, animals and the environment. The transportation, storage and use of hazardous materials is governed by regulations and safeguards. However, accidents, spills and leaks do occasionally happen.

If there is a spill or release in your area, emergency services will provide information on what to do to reduce your exposure and stay safe. They will use emergency alerts on radio, TV and/or social media or they may go door-to-door if necessary to notify residents.

You may be instructed to shelter-in-place or to evacuate. If emergency personnel advise you to evacuate, take your emergency kit with you and leave the area immediately. Do not return home until authorities inform you that it is safe.
SHELTER-IN-PLACE

If emergency services instruct you to shelter-in-place during a chemical spill then it is safer to stay indoors rather than going outside where you may be exposed to harmful chemicals. There are steps you can take to minimize exposure.

- Close and lock all exterior doors and windows.
- Turn off heating and air-conditioning systems that circulate air through your home and turn off all fans (e.g. kitchen range hood and bathroom ventilation fan).
- Retrieve your 72-hour emergency kit and turn on your radio.
- Move to an above-ground interior room, without windows, to take shelter.
- Use duct tape to seal air vents and cracks around the door.
- Monitor radio or television stations for more information; or social media feeds from emergency services or the City for information updates; you will be notified when it is safe to go outside.

**It’s important that you stay above ground.** Some chemicals are heavier than air and can seep into basements and accumulate.

If you suspect that you have been exposed to a hazardous material, call 9-1-1 immediately and seek medical care. Monitor any symptoms that you experience. Pay attention to dizziness, changes in heart rate, breathing, skin tone and level of consciousness. Tell medical personnel about these and any other symptoms that you notice.
EXPLOSIONS

Fuels such as natural gas and propane are explosive hazards. They have a distinctive smell and if you smell gas take action immediately.

IF YOU SMELL GAS:
- Open windows and doors to let fresh air in, leave the building and call 9-1-1.
- Do not turn electrical switches or appliances on or off and do not use lighters or matches.
- If you hear a hissing sound get to a safe distance immediately and call 9-1-1.

PROPNANE SAFETY:
- Use care when transporting, storing and connecting propane tanks.
- Do not store propane tanks indoors.
- If you have a large capacity propane tank for indoor gas fireplaces and appliances, have it inspected regularly for safety.
TECHNOLOGY FAILURES

EXTENDED POWER OUTAGES

Most power failures are short in duration, but during severe storms or other emergencies can last for hours, days or in some cases even weeks. Power outages combined with extreme hot or cold weather can put you at further risk.

BEFORE A POWER OUTAGE:

- Ensure you have working flashlights and batteries in your emergency kit.
- Install smoke and carbon monoxide detectors (with battery backup power) on every floor and test them regularly.
- Keep a fire extinguisher in your home.
- If you choose to have a backup generator, have it installed by professionals, check and maintain it regularly, and store enough spare fuel in approved containers.

DURING A POWER OUTAGE:

If your power goes out, first check the circuit breakers and fuses in your electrical panel. If neighbouring homes are affected as well, call your electricity distributor to report an outage. In addition:

- Check that stove elements and the oven are turned off and that nothing is sitting on the stove elements.
- Flashlights, battery-powered lanterns or glow sticks are safe lighting options to use.
- Unplug appliances and electronic equipment to protect them from surges when power returns.
- Turn off all lights except for one or two to let you know when power is restored.
- Keep refrigerator and freezer doors closed as much as possible to prevent food from spoiling.
- Use a crank or battery-powered radio to stay informed during an outage.
- Staying in touch with your family, friends and emergency responders during an emergency is critical. Lower your cellphone screen’s brightness and close apps you’re not using to save battery during an outage.
WHEN POWER IS RESTORED:
- Only turn on essential appliances at first and wait 15-20 minutes to turn on other appliances.
- Check that your refrigerator and freezer are working properly.
- After power is restored, check that food is safe to consume.

TELECOMMUNICATION SYSTEM FAILURES
In an emergency situation, telecommunications can be disrupted or even fail completely. You may not be able to get in touch with family members, friends or emergency services if phone lines are down.

STEPS YOU CAN TAKE:
- An analog (corded) telephone on a traditional land line may still operate during a power outage.
- For cellular phones, when possible send text or email messages instead of calling; text and email messages use less bandwidth when phone lines are overloaded.
- Contact your out-of-area contact if you cannot get in touch with family members.

UTILITY FAILURES
Utilities such as electricity, water and gas are essential to the operation of your home. In emergencies, these services may be disrupted.

WHAT YOU CAN DO TO BE PREPARED:
- Ensure gas appliances are turned off once you are finished using them.
- Do not use a gas range or oven or outdoor heater to heat your home.
- Use smoke and carbon monoxide detectors with battery backup and test them regularly.
Health emergencies can arise through the spread of infectious diseases or due to food and water contamination.

As the COVID-19 pandemic has shown, the effects of infectious diseases can be widespread on both the individual and the community. There are precautions that you can take to protect yourself and your family.

**COVID-19**

The COVID-19 pandemic has had a global effect on how we live, work and play. It highlights the seriousness of such illnesses, and the need to protect both you and your family from infection.

Hamilton Public Health Services is working with our health system partners and Ministry of Health to protect the health and safety of our community and ensure that the City is responding effectively to this situation.

Residents need to be mindful that the situation is continually evolving. For up-to-date information you are encouraged to visit Hamilton.ca/coronavirus.

**YOU CAN PROTECT YOURSELF AND OTHERS BY FOLLOWING THESE STEPS:**

- Stay home as much as possible.
- If you are out in public spaces, practice physical distancing and stay 2 metres (6 feet) away from others.
- If you are unable to practice physical distancing while out in public spaces, wear a face covering or mask to protect others.
- Wash your hands often with soap and water or use an alcohol-based hand sanitizer.
- Avoid touching your eyes, mouth and nose.
- Regularly clean and disinfect high-touch surfaces at home and work, including your cell phone and other devices.
- Avoid contact with people who are ill and their items.
- Cover your coughs and sneezes with a tissue. If you don’t have a tissue, cough or sneeze into your upper sleeve or elbow, not your hands. Wash hands after coughing and sneezing.
- Limit contact with people at higher risk (e.g., older adults and those in poor health).

INFLUENZA (FLU)

Influenza (flu) is a respiratory infection of the lungs and airways that is spread by a virus. Flu season usually runs from November until May and peaks in December. You can protect yourself and keep it from spreading by taking some precautions.

PREVENTION TIPS FOR SEASONAL INFLUENZA:

- Get the flu shot (for influenza).
- Wash your hands often with soap and water or use an alcohol-based hand sanitizer.
- Cover your mouth and nose when sneezing or coughing.
- Avoid rubbing your eyes, nose and mouth.
- Regularly clean and disinfect high-use surfaces at home and work.

If you or a family member develops symptoms and you have questions, call Telehealth Ontario: 1-866-797-0000. If symptoms are severe or develop suddenly, contact your family doctor or health care professional immediately.
FOOD AND WATER CONTAMINATION

Food and waterborne illness, often referred to as food poisoning, is generally caused by eating or drinking food or beverages contaminated by bacteria, parasites, viruses or other contamination including chemicals that can lead to mild or serious illness.

FOLLOWING THESE PREVENTION TIPS CAN HELP TO PROTECT YOU FROM FOOD OR WATER CONTAMINATION:

- Do not consume food if you suspect that it may not be safe and monitor the media for food recalls.
- If your water comes from a private well, Public Health recommends testing it at least three times each year.
IF YOU NEED TO EVACUATE

In some emergency situations you may need to evacuate your home. Authorities will not ask you to leave your home unless you are in danger.

IF YOU ARE ADVISED TO EVACUATE:

- Follow the instructions from emergency services personnel on when to leave, where to go and what routes to follow.
- Take your emergency kit, list of contacts, emergency plan, phone and phone charger with you.
- When you leave, lock your house and leave a note that indicates where you are going and a phone number where you can be reached.
- Contact your out-of-area contact – let them know where you are going, your planned route and when you expect to arrive.
- If you are directed to a reception or evacuation centre, follow the designated route.
- Upon arriving at a reception centre, register with the centre staff and call your out-of-area contact to give them an update.
- Do not attempt to return to an area that has been evacuated until you are informed it is safe.

MAKE AN EVACUATION PLAN

Where would you stay if you had to evacuate and leave your home for a few days?

STEP 4 – KNOW WHAT TO DO IN AN EMERGENCY
TAKE STEPS TO PROTECT YOUR HOME

- Close and lock all windows and doors.

- Locate the shut-off switches and valves for water, electricity, gas, heating and ventilating systems in your home and label switches and valves to clearly mark the on/off position.

- Do not shut off your natural gas, water or electricity unless you are advised to do so by emergency officials (if you turn off your gas line a qualified technician will have to reconnect it; after an emergency it could take weeks for a technician to respond, leaving you without gas for heating and cooking).
AFTER AN EMERGENCY

- Check yourself and family members for injuries.
- Help injured individuals and provide basic first aid – call 9-1-1 if you need emergency services.
- Check for fire hazards and gas leaks; if there are any hazards present, leave your house and call 9-1-1.
- When you and family members are safe, check on your neighbours.
- Monitor local radio, television stations and social media for information from emergency officials.
- Use telephones and cell phones as little as possible; keep the lines free for those who need them most.
- Stay away from disaster areas to avoid interfering with rescue work.
- Check your home and property for damage – if there are signs of major damage do not enter the building until it has been determined to be safe.
- After extended power outages, dispose of food that may not be safe.
- Contact family members to let them know that you are safe.
- Contact your insurance company.

INSURANCE AND EMERGENCIES

Check your insurance policy before a disaster strikes to determine if you have enough coverage, and exactly what types of damage will be covered. For example, damage from overland flooding is not usually covered by insurance policies. Understanding what coverage you have will help you to recover after an emergency.

Note that insurance can also help to pay for additional living expenses after an emergency. Insurance may cover accommodations if you are required to move out of your home while repairs are being made.

Keep an up-to-date inventory of your home contents.

Take photographs, record serial numbers and keep copies of receipts to know the value of your belongings. If an emergency damages your home or possessions, take immediate steps to protect your property from further damage and contact your insurance company as soon as possible.

More information on emergencies and insurance can be found on the Insurance Bureau of Canada website: www.ibc.ca
COPING WITH THE AFTERMATH

CHILDREN AND EMERGENCIES

Children may experience some anxiety and fear after an emergency and parents can help them to cope. Here are steps you can take to reassure them and keep them safe:

- Some children may feel fear and worry that it will happen again.
- Listen to their fears and concerns and encourage them to talk about it.
- Reassure them about what is being done to return life back to normal.
- Provide children with information at an age-appropriate level.
- Keep routines as consistent as possible and make time for recreation and play.
- Children may require extra time, support and comfort from parents and caregivers.

WHAT YOU AND YOUR FAMILY MIGHT EXPERIENCE

- Emergencies are stressful events and individuals react to them in different ways.
- Recognize that it is normal to feel upset, worried or anxious after an incident.
- Talk to family members and friends and be there to listen to others as well.
- There may be extra work to do after an event, but it is still important to balance activity and rest.
- If distressing feelings or reactions continue to persist after the event or if you have experienced particularly traumatic losses, it is important to seek help through your employer, community services, or talk to your family doctor.
Step 4 – Know what to do in an emergency

PARTNERS IN PREPAREDNESS

CITY OF HAMILTON EMERGENCY MANAGEMENT PROGRAM

Carrying out an effective response to an emergency results from planning, coordination and preparedness before an emergency arises. The City of Hamilton Emergency Management program identifies and prepares for hazards in our community. This includes emergency response and recovery planning.

Large-scale community emergencies require an integrated response from a variety of organizations from both the public and private sectors. The City of Hamilton's Emergency Management Office has established partnerships in emergency management across our City, including with emergency services agencies, hospitals, utility providers, private industry, the education sector, and community partner agencies. The City also prepares for how information is communicated to the public in the case of an emergency. Information is shared via many channels, and in accessible formats (e.g. ASL interpreters at public information sessions).

More information about the City of Hamilton's Emergency Management program can be found at www.hamilton.ca/emergency
