Hamilton Ward Boundary Review

Presentation of Findings and Recommendation to the City of Hamilton General Issues Committee

February 1, 2017
Study Overview

This W.B.R. represents the first opportunity that the municipal representation needs of all residents of the amalgamated City are being considered collectively.
Study Overview (Cont’d)

Study Objectives

The 2015-2016 Hamilton W.B.R. is premised on the legitimate democratic expectation that municipal representation in Hamilton will be:

- effective;
- equitable; and
- an accurate reflection of the contemporary distribution of communities and people across the City.
**Study Process**

October 2015

**Phase 1**
- Review data
- Develop public engagement strategy
- Gather information on the present ward system

**Phase 2**
- Hold public information and engagement sessions concentrating on the existing ward structure and guiding principles (Round 1 Consultation)

**Phase 3**
- Prepare Interim Report
- Public consultations on preliminary options (Round 2 Consultation)

February 2017

**Phase 4**
- Prepare Final Report including final options
- Present findings and recommendations to General Issues Committee

We are here
A Final Report, dated October 11, 2016, was referred to the General Issues Committee (G.I.C.) of Hamilton City Council for consideration on October 27, 2016.

The report presented two ward boundary options for Council’s consideration:

- a 15-ward Option; and
- a 16-ward Option.
At the conclusion of the G.I.C. meeting, members of Hamilton City Council requested:

- an opportunity to forward to the Consultant Team “any further suggestions that the Council members may have for alternative ward boundary model options”; and

- that the consultants report back to a future meeting of the G.I.C. in the form of a consolidated report that includes “any additional ward boundary model options that may be provided by members of Council” as well as the two options included in the City of Hamilton Ward Boundary Review Final Report.
A number of Councillors provided suggestions to the consultants through the City Clerk’s Office.

All but one of these submissions suggested adjustments to the existing 15-ward configuration – one exception asked to consider a modification to a ward boundary in the proposed 15-ward Option presented in the October Final Report.

Close to 100 residents of Ward 6 contacted the Clerk’s Office to object to a specific provision of the proposed 15-ward Option as it affected the East Mountain area.

No suggestions were submitted in relation to the proposed 16-ward Option.
To comply with Council’s request, the Consultant Team has prepared an amended Final Report, dated January 16, 2017.

The report presents three alternative Options for Members of Council to consider:

- the existing 15-ward system modified in light of submissions made by Councillors (Option 1);
- the 15-ward Option included in the Final Report as modified in light of concerns and suggestions directed to the Consultant Team (Option 2); and
- the 16-ward Option included in the October 11, 2016 Final Report (Option 3).
Hamilton’s W.B.R. is framed by six principles adopted by Council (Clerk’s Report CM15004, March 30, 2015):

a. Representation by population;
b. Population and electoral trends;
c. Means of communication and accessibility;
d. Geographical and topographical features;
e. Community or diversity of interests; and
f. Effective representation.
A Changing City and Considerations for Ward Boundary Design

- Since 2001, Hamilton’s population has increased by 9%; do the ward boundaries reflect the changing nature of the City?

- The population is expected to increase by 12% (68,000 people) over the next decade especially in the present Wards 11, 9 and 15; will the ward boundaries continue to reflect the changing nature of the City?
A Changing City and Considerations for Ward Boundary Design (Cont’d)

Population Growth Trends and Shifts:

- former City of Hamilton vs. suburban population balance – population continues to shift towards suburban communities;

- urban vs. rural population growth trends – Hamilton’s population increasingly urban; and

- west vs. east population balance – population and growth concentrated in the east side of the City.
A Changing City and Considerations for Ward Boundary Design (Cont’d)

Urban population clusters in Hamilton today are largely inter-connected.

City of Hamilton Urban Growth, 1971 to Present
Provincial Regulation 448/00 following amalgamation established a system of 15 wards:

- 8 wards in the old City of Hamilton; and
- 7 wards in suburban/rural areas.
## Evaluation of Present System

Final Options

Option 1 - a modified version of the existing ward structure based on feedback provided by members of Council after the G.I.C. meeting of October 27, 2016;

Option 2 - a 15-ward Option that strives to optimize population parity (representation by population). Represents a modified version of the 15-ward Option presented in the October Final Report.

Option 3 - a 16-ward Option that, through the addition of one ward, achieves a reasonable population balance by ward and preserves communities of interest, while finding better effective representation than a 15-ward Option.

Conclusions

This evaluation suggests strongly that the existing ward boundary configuration does not meet the expectations of three of the guiding principles – representation by population, population and electoral trends, and effective representation.

This Review suggests that Hamilton would be better served by an alternative ward boundary configuration.
While Option 1 represents a marginal improvement to the status quo, the Option does not address the structural deficiencies present in the existing ward structure.

Option 2 (15-ward configuration) and Option 3 (16-ward configuration) both successfully address shortcomings identified in the present system.
Options 2 and 3 provide wards that are better balanced in population now and over the next three elections while accommodating a significant geographic community of interest and the various emerging neighbourhoods across the City.

Option 2 or Option 3 is recommended as a viable ward boundary option for the City to ensure effective and equitable representation for the residents of Hamilton both today and over the next decade.
Conclusions (Cont’d)

- We recommend that Council consider the adoption of a new 15-ward or 16-ward configuration for the 2018 election as identified in this Review.

- When Council adopts a revised ward structure, a new by-law will be prepared by City staff and presented to Council at a later date.
