Preparring Today for the Jobs of Tomorrow
OUR FUTURE HAMILTON, OUR COMMUNITY VISION

Our Future Hamilton is the city’s 25-year community vision. It builds on the legacy of Vision 2020, Hamilton’s first community vision that was approved by City Council in 1992. From 2015-2016, Our Future Hamilton engaged with nearly 55,000 residents and community partners to create a new shared community vision, including six community priorities, 88 key directions, and 57 signs of success to guide long-term planning. The City of Hamilton and over 125 community organizations have committed to implementing the community vision.
HAMILTON’S ANNUAL PUBLIC ENGAGEMENT SUMMIT

Hamilton’s annual public engagement summit is one of the legacies of Our Future Hamilton. Established in 2016, the Our Future Hamilton Summit continues to grow each year and is now one of the largest public engagement summits in the country. Approximately 500 participants including residents, community partners, academia, policy makers, municipalities and other stakeholders attend the free annual summit in November.

Each year, the summit examines current issues that our community prioritized through the visioning process and share our collective progress in moving the vision forward. In addition to highlighting key partnerships and local initiatives, the annual summit provides an opportunity for continued public engagement, collaboration, and collective action-taking involving government, community partners and residents.
ATTENDEE PROFILE

149 residents

187 community partners

81 City of Hamilton staff, elected officials and their representatives

85 youth

16 representatives from other municipalities
Hamiltonians have told us they want a city that is built upon a strong local economy, supports farming and agriculture, creates better employment opportunities, and advances skill development. The theme for the fourth annual summit was *Preparing Today for the Jobs of Tomorrow*. At the 2019 summit, participants and speakers explored key trends that could impact the future of work in Canada over the next 10-15 years and how these changes may affect local skill demands in Hamilton.

Janette Smith, City Manager, City of Hamilton
COMMUNITIES IN CONVERSATION:
TABLE DISCUSSION FINDINGS

Following a series of keynote presentations, summit attendees discussed the top employment issues facing Hamilton today and proposed suggestions to address them. Volunteer facilitators, including 35 CityLAB students, helped to record over 1800 conversation insights. This report provides an overview of the five key themes that emerged from over 50 table discussions as well as suggestions from participants for further action and collaboration among our public, private, and non-profit sectors.

Five key themes emerged from the table discussions:

1. EMPLOYMENT OPPORTUNITIES
2. EDUCATION AND SKILLS DEVELOPMENT
3. EQUITY, DIVERSITY, AND INCLUSION
4. HEALTHY AND SUPPORTIVE WORKPLACES
5. LOCAL ECONOMY AND TRANSPORTATION INFRASTRUCTURE

CityLAB Hamilton is a social innovation hub that brings together student, academic, and civic leaders to co-create a better Hamilton for all. Partners include the City of Hamilton, McMaster University, Mohawk College, and Redeemer University. Working in collaboration with students, City of Hamilton staff and local post-secondary faculty members co-design projects to address challenges affecting our city.

www.citylabhamilton.com
A key issue identified by summit participants was the precarious nature of current employment opportunities. The impact of informal work, temporary contracts, interim or casual work, seasonal employment, and involuntary part-time work was commonly discussed among attendees. Reduced financial security, lower wages, and limited access to employee benefit programs that are often associated with precarious employment positions were also leading discussion points.

Frequently cited barriers to accessing employment included lack of child care and affordable housing, transportation challenges, health conditions, discriminatory hiring practices, as well as restricted opportunities for youth and those with a criminal record. Experiences like not knowing how to start looking for a job, access job postings, or network were identified as additional difficulties people are facing in an ever-changing employment landscape.

Participants suggestions to increase access to employment:

- Advocate with unions, local government, and members of parliament to support action on full-time job creation.
- Develop local talent through paid internships and job matching mentorship programs offered by local institutions and private sector businesses.
- Provide access to safe and affordable child care services including 24-hour services.
- Increase awareness around existing local employment resources, services, and agencies.
- Coordinate job fairs and networking opportunities across the city including rural areas.
Ensuring that youth are prepared today for the jobs of tomorrow was a pressing call for action. Concerns about growing gaps between the training provided in educational institutions, employers’ current and projected needs, labour shortages, and skills mismatches were widely discussed as challenges facing youth today. Participants also noted the need for enhanced soft skills as a core competency for youth transitioning into the workforce. Flexible learning environments, opportunities for skills upgrading, and the ability to embrace a lifelong learning process were identified as being fundamental to establishing multiple pathways to success.

Addressing the current “skills mismatch” was a significant priority echoed among summit attendees. Participants reflected on the multi-faceted nature of a skills mismatch that is driven in part by graduates in fields with limited employment opportunities and the resulting trend of having highly educated persons in positions for which they are over-qualified and lesser-qualified persons being consequently edged out of the labour market. Going beyond the issue of growing competition and limited availability of entry level positions in some sectors, participants also highlighted sectors with strong employment demands like skilled trades and skilled labour.

Recommended opportunities for action suggested by participants:

• Create stronger alignment and partnerships between employment sector needs and the training offered in educational institutions.
• Develop a skills gap inventory among local employers to support educational programs in offering training that reflects available employment opportunities.
• Integrate soft skill development into education sector curriculum and professional development training programs. Noted soft skills included: problem-solving skills, critical-thinking skills, communication skills, emotional intelligence, and team building.
• Increase youth access to experiential multidisciplinary co-op programs, entry-level internships, and apprenticeships.
• Provide youth opportunities for informal learning through meaningful volunteer activities.
• Expand career guidance in secondary schools to help students identify current and anticipated career opportunities, relevant training programs, and emerging skill demands.
• Increase awareness about the numerous opportunities that exist in today’s labour market and reduce stigma associated with skilled trades.
Race, gender, ability, and age were commonly identified as barriers to accessing employment. Women from racialized backgrounds, members of the Indigenous community, and newcomers to Canada were specifically among those mentioned by attendees as facing compounding challenges within the labour market including higher rates of unemployment and earning lower rates of pay. Systemic racism, discriminatory hiring practices, and a lack of diversity across all employment sectors were important matters of concern.

Immigrants help to build a more dynamic economy, alleviate population decline, increase diversity, and ensure shared prosperity for all. However, many of the personal experiences shared by newcomers attending the summit revealed a long, frustrating, and costly path to obtaining employment within their fields of expertise. Commonly noted employment barriers for internationally-trained professionals included fees for credential assessment, certification, and examinations as well as tuition costs for additional training. Lack of “Canadian Work Experience” and skill recognition were also discussed as major challenges to employment.

Participants’ suggested ideas for improvement included:

• Encourage community agencies and institutions to conduct an Equity, Diversity and Inclusion (EDI) audit of their organization.
• Incorporate EDI education into post-secondary courses and professional training programs.
• Offer government or industry funded training and mentorship programs to support an aging workforce.
• Promote inclusion and accessibility by using the Dynamic Symbol of Action and provide accessible accommodation for employees with special needs.
• Encourage career opportunities that use an accessibility lens and provide incentives for employers to attract workers with accessibility needs.
• Increase awareness and support for English as Second Language (ESL) classes.
• Provide grants to assist internationally-trained professionals with re-certification.
• Advocate the Federal government to examine newcomer barriers to integration and support for increased recognition of international skills.
• Offer grants to assist with re-certification of international professionals.
The importance of building effective workplace cultures that support the mental health and well-being of employees both within their team and work environments was a main topic of discussion among attendees. Welcoming and inclusive work environments that create an overall sense of comradery were identified as essential components of a healthy and supportive workplace. Participants also called for increased flexibility within the overall workplace structure, including routines, expectations, interactions, and learning opportunities.

Lack of trust, workplace bullying, over-controlling environments, and minimal investment in employees were conversely seen to contribute to unhealthy workplace cultures and high-staff turnover. A lack of loyalty on behalf of both employers and employees was frequently noted along with demands for increased training and job advancement opportunities. Participants identified several target actions that organizations can take to create positive, healthy, and effective workplace cultures.

Suggested ideas for creating health and supportive work environments:

- Support flexible work schedules and work arrangements.
- Provide company-funded continuous learning opportunities and customized training programs to support a changing workforce and incentivize employee retention.
- Offer benefit packages for contact employees and extend benefits to employees following retirement.
- Provide access to occupational health therapists, counselling services, and mental health support programs.
- Increase long-term employment options and job security.
- Coordinate team-building events to engage employees and build a stronger, more effective, and cohesive company culture.
Housing affordability, food security, cost of living, and the need for a living wage policy were top issues discussed among summit participants. Attendees expressed interest in learning more about Hamilton’s diversified economy as well as both current and future living-wage job opportunities. They also voiced concern about the decline in local manufacturing, outsourcing of jobs, and heavy reliance on the residential tax base to fund municipal services. More support for self-employed entrepreneurs, innovative businesses, and the local arts community were common calls for action.

Given the important role of infrastructure in supporting a healthy economy, driving business, and connecting workers to their jobs, infrastructure related matters were an intertwined topic of conversation at the summit. Service reliability, accessibility challenges for people living with disabilities, and limited services in rural areas were key discussion points regarding public transit. Increased GO service to Toronto, advocacy for Hamilton’s light rail transit plan, and the lack of parking around commercial properties were other matters of discussion.

Recommended ideas for action included:

- Increase awareness of Hamilton’s Small Business Centre and available supports for entrepreneurs and small businesses.
- Attract skilled and talented workers by investing more in Hamilton’s arts and culture sector.
- Strengthen marketing strategies to promote new businesses and attract outside investment.
- Intensify city-wide investment in public transit (HSR) including increased transit frequency and services to major employment areas.
- Expand the SOBI Bike Share Program and extend bike lanes and paths to include areas on the Hamilton mountain.
- Review opportunities for partnerships with ride share programs.
- Invest in sustainable transportation infrastructure in response to the climate change crisis.
- Explore the establishment of a living wage policy across community organizations.
